Ewert, 2012-12-06 Historically the search for the neural bases of behavior goes back a long way Neuroethology which is concerned with the experimental analysis of the releasing and control mechanisms of behavior is a young discipline Results from this multidisciplinary branch of research which uses physical chemical and mathematical methods have not yet been

extensively treated in textbooks of neurophysiology and ethology This book is intended as a first attempt to pose major questions of neuroethology and to demonstrate by means of selected research examples some of the ways by which these questions are being approached Inevitably this cannot be a complete and in depth detailed treatment of all of the neurobiology examples and I realize that such a selection is of a subjective nature The overall goal of the book is to present an introduction After outlining some of the very basic neurophysiological and ethological concepts Chaps 2 and 3 neuroethological questions and methods are demonstrated extensively by means of a particular example Chap 4 There are two reasons to choose the visually guided prey catching and avoidance behavior of the Common Toad 1 it is a system which I have investigated for about fifteen years and therefore know best 2 the toad story is one of the most comprehensive neuroethological approaches so far Thus it is possible here to outline the major concepts of neuroethology and to pose the basic questions

The Neurobiology of Motivation and Reward James Stellar, 2012-12-06 This book was conceived many years ago as an abstract goal for a father son team when the father was working in university administration and the son was just getting into the academic business Eventually the father returned to the laboratory the son began to get his feet on the ground and the goal became concrete Now the work is finished and our book enters the literature as we hope a valuable contribution to understanding the terribly complex and subtle problem of the neuro biology of motivated behaviors We would also like the book to stand as a personal mark of a cooperative relationship between father and son This special relationship between the authors gave us an extra dimension of pleasure in writing the book and it would delight us if it gave anyone else an extra dimension of enjoyment from reading it One thing we hope happens is that anyone or simply considering entering similar considering a similar partnership of this book as encouragement Such relationships will take the existence lationships are highly satisfying if both parties take care to

protect the partnership When we actually sat down to write the book we were humbled by the immense literature and the smallness of both our conceived space for putting it down and of our brains for processing all the information *An Introduction to Neuroendocrinology* Richard E.
