Annual Review Of Earth And Planetary Sciences Volume 4 1976:

NASA Reference Publication, 1977 **The Age of the Earth** G. Brent Dalrymple, 1991 A synthesis of all that has been postulated and is known about the age of the Earth **Unified Physics** Reginald Irvan Gray, 1988 **Encyclopedia of Quaternary Science** Cary Mock, 2013-03-25 The second revised edition of the Encyclopedia of Quaternary Science Four Volume Set provides both students and professionals with an up to date reference work on this important and highly varied area of research There are lots of new articles and many of the articles that appeared in the first edition have been updated to reflect advances in knowledge since 2006 when the original articles were written The second edition will contain about 375 articles written by leading experts around the world This major reference work is richly illustrated with more than 3 000 illustrations most of them in colour Research in the Quaternary sciences has advanced greatly in the last 10 years especially since topics like global climate change geologic hazards and soil erosion were put high on the political agenda This second edition builds upon its award winning predecessor to provide the reader assured quality along with essential updated coverage Contains 357 broad ranging articles 4310 pages written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource for information in the field Facilitates teaching and learning The first edition was regarded by many as the most significant single overview of Quaternary science ever yet Editor in Chief Scott Elias has managed to surpass that in this second edition by securing even more expert reviews whilst retaining his renowned editorial consistency that enables readers to navigate seamlessly from one unfamiliar topic to the next [Geology and Tectonics of the Lake Superior Basin](#) Richard John Wold, William J. Hinze, 1982-01-01 **Santorini** Walter L. Friedrich, 2009-10-27 When the Greek island of Santorini classically known as Thera erupted dramatically in 1613 BC 13 years it produced one of the largest explosions ever witnessed thereby possibly giving rise to the legend of Atlantis This so called Minoan eruption triggered tsunamis that devastated coastal settlements in the region and on Santorini it left behind a Bronze Age Pompeii which is currently being excavated Thriving Bronze Age settlements on the island rich in colorful wall paintings and highly sophisticated pottery were buried under thick layers of volcanic ash The ejection of an immense volume of dust into the atmosphere also altered global climate for several years The author a well known geologist blends the thrill of scientific discovery with a popular presentation of the geology archeology history peoples and environmental settings of the island group of Santorini He not only gives a comprehensive overview of the volcanic island and its past but also reports on the latest discoveries The finding for example of the olive trees which had been buried alive by the Minoan eruption has made it possible now to give a direct and precise radiocarbon date for the volcanic catastrophe Furthermore he seeks to assign certain geological structures such as faulted rocks red lavas and harbor sites as depicted on the Bronze Age frescos from Santorini to still existing details in the Santorini landscape of today Excellent color photographs and illustrations along with easily understandable scientific and historic details will make this

book highly appealing to a wide audience It will also be useful as a supplementary text for introductory courses in earth and atmospheric science geology volcanology and paleoclimatology as well as ancient history and archeology Physics and Chemistry of the Solar System John S. Lewis,2013-10-22 Physics and Chemistry of the Solar System is a broad survey of the Solar System The book discusses the general properties and environment of our planetary system including the astronomical perspective the general description of the solar system and of the sun and the solar nebula The text also describes the solar system beyond mars including the major planets pluto and the icy satellites of the outer planets the comets and meteors and the meteorites and asteroids The inner solar system including the airless rocky bodies mars venus and earth and planets and life about other stars is also encompassed Mathematicians chemists physicists geologists astronomers meteorologists and biologists will find the book useful **Precambrian: Conterminous U.S.** John C. Reed, Jr., Marion E. Bickford, R.S. Houston, Paul Karl Link, D.W. Rankin, Paul K. Sims, W. Randall Van Schmus, 1993 This wide ranging discussion of Precambrian rocks includes contributions from a diverse array of authors actively engaged in investigations of various aspects of U S Precambrian geology Summary discussions by the editors of the five major chapters place these contributions in a logical regional framework **Books in Print** ,1994 Observing the Moon Peter T. Wlasuk, 2013-04-17 Why write another guide to observing the Moon That was the question I was pondering as I began this project having a fine collection of classic lunar guidebooks dating back to 1791 in my own library As a Fellow of the Royal Astronomical Society RAS member of the American Astronomical Society's Division for Planetary Sciences AAS DPS and member of the American Geophysical Union AGU I am fortunate to know many professional lunar scientists who keep me up to date with developments in lunar science contrary to public perception lunar science has definitely not stagnated since the last Apollo No 17 left the surface of the Moon in December 1972 I am also lucky to know many amateur lunar observers who like me enjoy actually looking at the Moon with telescopes and imaging it with a wide variety of devices ranging from regular 35 mm cameras to video recorders and CCD cameras My friends who study the Moon whether in their professions or just for fun gave me several reasons for doing another lunar guidebook First the last lunar observer's guide of any length was published over ten years ago and many reviewers noted that it was badly out of date even then **Annual Review of Fluid Mechanics** ,1969 **NASA Technical Paper** ,1981 **Strength Testing of Marine Sediments** Ronald C. Chaney, K. R. Demars, 1985 Philadelphia PA ASTM 1985 *Tectonic Setting of Faulted Tertiary Strata Associated with the Catalina Core Complex in Southern Arizona* William R. Dickinson, 1991 Mid Tertiary strata exposed as tilted homoclines along the flanks of the San Pedro trough and across broad uplands north of the Catalina core complex are assigned to the following formations each of which includes informal local members and facies a Mineta Formation mid Oligocene redbeds including both conglomeratic fluvial and finer grained lacustrine deposits b Galiuro Volcanics including lavas and domes air fall and ash flow tuffs and intercalated volcaniclastic strata of late Oligocene to earliest Miocene age c Cloudburst Formation also of late Oligocene and earliest

Miocene age but including a sedimentary upper member of conglomeratic strata as well as a volcanic lower member correlative with part of the Galiuro Volcanics and d San Manuel Formation composed of lower Miocene alluvial fan and braidplain deposits that display contrasting clast assemblages in different areas of exposure Generally correlative Oligocene Miocene strata exposed south of the Catalina core complex are assigned to the Pantano Formation which contains similar lithologic components Less deformed Neogene strata of post mid Miocene basin fill are assigned to the Quiburis Formation along the San Pedro trough but stratigraphic equivalents elsewhere lack adequate nomenclature High benchlands mantled by paleosols mark the highest levels of Neogene aggradation Successive stages of subsequent erosional dissection are recorded by multiple terrace levels incised into basin fill Key exposures of syntectonic mid Tertiary sedimentary sequences in several local subareas reveal typical structural and stratigraphic relationships Multiple fault blocks expose pre Tertiary bedrock overlain by tilted mid Tertiary strata confined to intervening half grabens Bounding syndepositional faults dip southwest and associated homoclines dip northeast Fanning dips and buttress unconformities reflect progressive tilt and burial of eroding fault blocks Dips of block bounding faults are inversely proportional to the ages of the faults Steeper dips for younger faults suggest either progressive erosion of successive listric faults or progressive rotation of successive planar faults Uniformly moderate to steep dihedral angles between fault surfaces and offset homoclinal bedding imply that the faults dipped more steeply near the surface when syntectonic mid Tertiary strata were subhorizontal Although the inference of listric faulting best links apparent strands of the Catalina detachment system the alternate interpretation of rotational normal faulting is compatible with local structural relationships including tilt of porphyry copper orebodies Within the San Pedro trough multiple homoclines of mid Tertiary strata are exposed locally in tilt blocks exhumed by Neogene erosion from beneath nearly flat lying basin fill of the Quiburis Formation Faults bounding the mid Tertiary exposures include backtilted strands of the Catalina detachment system somewhat younger listric or rotational normal faults and steeper basin range normal faults that display offsets both synthetic and antithetic to the flanks of the San Pedro trough In Cienega Gap flanking the Tucson Basin multiple tilt blocks of the Pantano Formation form part of the upper plate of the Catalina detachment system Initial construction of alluvial fans by generally westward paleoflow was followed by ponding of lacustrine environments along the foot of secondary breakaway scarps that also generated massive megabreccia deposits In summary syntectonic Oligocene to Miocene sedimentation succeeded a prominent pulse of polymodal mid Tertiary volcanism and was coeval with mylonitic deformation and detachment faulting along the flank of the Catalina core complex The headwall rupture for the detachment system migrated westward from an initial position along the range front of the Galiuro Mountains After mid Miocene time accumulation and subsequent dissection of essentially undeformed basin fill was accompanied by basin range block faulting The most challenging structural issue is whether fault strands of the Catalina detachment system are interconnected or are disconnected rotational segments
