National Strategic Planning and Practice Liaquat Hossain, 2024-11-01 This title was first published in 2001 This text explores the relationship between telecommunications strategic planning process TSPP the organization and the environment for developing an understanding of the idea of a national TSPP NTSP in Thailand The overall aim is to explore an understanding of an NTSP by providing a detailed study of the strategic planning and practices of the Thai telecom regulators during the period from 1954 to 1996 It applies the strategic planning process principles to further the understanding of NTSP in Thailand By using the SPP framework the study develops a theoretical TSPP framework for analyzing the underlying TSPP strategies within the national telecom regulators in Thailand It also seeks to illustrate the limitations of the traditional strategic planning theory when applied to NTSP From a theoretical perspective this book

illustrates that a lack of formalization and consensus in Thailand's NTSP is the fundamental backlog for the successful operation of its industry Light-weight Experience Collection in Distributed Software Engineering Anna Averbakh, 2015

Nowadays distributed software development has become more common. In a distributed project setting, managing experience is even more crucial than in a co-located project. Problems like ineffective communication, lack of awareness and trust, and restrictive information flow policies impede experience exchange and raise the overall effort for software engineers to collaborate. Moreover, sharing experiences is usually not part of the development process and considered additional effort. This often leads to failure of the experience management initiative due to a lack of participation. This thesis proposes a framework for qualitative and quantitative assessment of light weight experience collection. Light weight methods primarily aim at lowering the perceived effort and return a reasonable benefit to the experience bearers. This thesis proposes characterizing criteria of light weight experience collection and a measurement system to measure gradations of expected effort and benefit of an experience collection method. To support knowledge managers in choosing the appropriate collection method, this thesis provides a catalogue of strategies from different categories and areas of application in distributed development projects **Dark Web** Hsinchun Chen, 2011-12-17 The University of Arizona Artificial Intelligence Lab AI Lab

Dark Web project is a long term scientific research program that aims to study and understand the international terrorism Jihadist phenomena via a computational data centric approach. We aim to collect ALL web content generated by international terrorist groups including web sites, forums, chat rooms, blogs, social networking sites, videos, virtual world, etc. We have developed various multilingual data mining, text mining, and web mining techniques to perform link analysis, content analysis, web metrics, technical sophistication analysis, sentiment analysis, authorship analysis, and video analysis in our research. The approaches and methods developed in this project contribute to advancing the field of Intelligence and Security Informatics (ISI). Such advances will help related stakeholders to perform terrorism research and facilitate international security and peace. This monograph aims to provide an overview of the Dark Web landscape, suggest a systematic computational approach to understanding the problems, and illustrate with selected techniques, methods, and case studies developed by the University of Arizona AI Lab Dark Web team members. This work aims to provide an interdisciplinary and understandable monograph about Dark Web research along three dimensions: methodological issues in Dark Web research, database and computational techniques to support information collection and data mining, and legal, social, privacy, and data confidentiality challenges and approaches. It will bring useful knowledge to scientists, security professionals, counterterrorism experts, and policy makers. The monograph can also serve as a reference material or textbook in graduate level courses related to information security, information policy, information assurance, information systems, terrorism, and public policy 1945-1978 Maria Witt, 2013-02-07 No detailed description available for 1945-1978 *Catalog of Copyright Entries.
