Clinical Applications of Cytokines and Growth Factors John R. Wingard, George D. Demetri, 1999-05-31 The hematopoietic system plays roles that are crucial for survival of the host delivery of oxygen to tissues arrest of accidental blood leaking from blood vessels and fending off of invading microbes by humoral cell mediated and phagocytic immunity The activity of the hematopoietic system is staggering daily a normal adult produces approximately 2.5 billion erythrocytes 2.5 billion platelets and 1 billion granulocytes per kilogram of body weight This production is adjusted in a timely fashion to changes in actual needs and can vary from nearly none to many times the normal rate depending on needs which vary from day to day or even minute to minute In response to a variety of stimuli the cellular components of the blood are promptly increased or decreased in production to maintain appropriate numbers to optimally protect the host from hypoxia infection and hemorrhage How does this all happen and happen without over or under responding There has been extraordinary growth in our understanding of hematopoiesis over the last two decades Occupying center stage is the pluripotent stem cell and its progeny Hematopoietic stem cells have been characterized by their capacity for self renewal and their ability to proliferate and differentiate along multiple lineages Few in number the stem cell gives rise to all circulating neutrophils erythrocytes lymphoid cells and platelets In hematopoietic transplantation the stem cell is capable of restoring long term hematopoiesis in a lethally irradiated host *Thomas' Hematopoietic Cell Transplantation* Frederick R. Appelbaum, Stephen J. Forman, Robert S. Negrin, Karl G. Blume, 2011-09-26 This outstanding reference source on bone marrow transplantation has become recognised as the bible in the field This fourth edition has been fully revised to reflect latest developments and now features over 500 illustrations including a colour plate section The need for this new edition cannot be overstated more than 13 000 new cases per year of haematopoietic stem cell transplantation have been reported to the International Bone Marrow Transplant Registry The original editor Donnan Thomas was a pioneer in stem cell research and won the 1990 Nobel Prize for his discoveries concerning organ and cell transplantation in the treatment of human diseases The book also now includes a fully searchable CD with PDFs of the entire content *Red Cell Transfusion* Marion E. Reid, Sandra J. Nance, 2012-12-06 Authoritative experts in transfusion medicine describe in critical detail the most important procedures for obtaining selecting and transfusing red blood cells to patients The topics covered include such key issues as transfusion problems in the immunocompromised the complications of autoantibodies transfusion of infants with hemolytic disease difficulties arising from solid organ transplantation stem cell transfusions and the challenges of massive transfusion Also discussed are the use limitations and alternatives to autogeneic cells long term red cell transfusion the management of adverse reactions to red cell transfusions and the question of blood group antigens and their association with disease and differential diagnosis The book offers transfusion specialists fresh insights and information to maximize and extend their current knowledge
