Constructing Measures An Item Response Modeling Approach:

Constructing Measures Mark Wilson, 2005 *Constructing Measures* Mark Wilson, 2023-06-05 *Constructing Measures* introduces a way to understand the advantages and disadvantages of measurement instruments. It explains the ways to use such instruments and how to apply these methods to develop new instruments or adapt old ones based on item response modeling and construct references. Now in its second edition, this book focuses on the steps taken while constructing an instrument and breaks down the building blocks that make up an instrument: the construct map, the design plan for the items, the outcome space, and the statistical measurement model. The material covers a variety of item formats including multiple choice, open ended, and performance items; projects, portfolios, Likert and Guttman items; behavioral observations and interview protocols. Each chapter includes an overview of the key concepts, related resources for further investigation, and exercises and activities. A variety of examples from the behavioral and social sciences and education, including achievement and performance testing, attitude measures, health measures, and general sociological scales, demonstrate the application of the material. New to this edition are additional example contexts including a cognitive achievement example, an attitude example, and a behavioral example, and new concentrations on specific measurement issues and practices such as standard setting, computer delivery, and reporting, and going beyond the Likert response format. *Constructing Measures* is an invaluable text for undergraduate and graduate courses on item test or instrument development, measurement item response theory, or Rasch analysis, taught in a variety of departments including education, statistics, and psychology. The book also appeals to practitioners who develop instruments, including industrial, organizational, educational, and school psychologists, health outcomes researchers, program evaluators, and sociological measurers.

The individual chapters, contributed by authors from Canada, China, Germany, Philippines, and the USA, cover a variety of current topics on measurement concerning science: conceptual understanding, scientific argumentation, scientific reasoning, three-dimensional learning, knowledge in use, and cross-cutting concepts of the Next Generation Science Standards; medical education; learning experiences; machine scoring; bias; formative assessment; and teacher knowledge of argument. There are additional chapters on advances in Rasch analysis techniques and technology, including R, Bayesian estimation, comparison between joint maximum likelihood (JML) and marginal maximum likelihood (MML) estimations on model data fit, and enhancement to Rasch models by Cognitive Diagnostic Models and Latent Class Analysis. The volume provides readers who are new and experienced in applying Rasch measurement with advanced and exemplary

What Mathematics Do Students Know and How is that Knowledge Changing? Peter Kloosterman, Doris Mohr, Crystal Walcott, 2015-09-01 This volume is intended for researchers curriculum developers policy makers and classroom teachers who want comprehensive information on what students at grades 4 8 and 12 the grades assessed by NAEP can and cannot do in mathematics After two introductory chapters on the design of NAEP the volume contains a chapter on the challenges in analyzing NAEP data at the item level followed by five chapters that report 2005 through 2013 student performance on specific assessment items These chapters are organized by content area and then by topic e g understanding of place value knowledge of transformations ability to use metric and U S systems of measurement and thus provide baseline data on the proportion of students who are able to complete the mathematics tasks currently used in the upper elementary middle and high school mathematics curriculum Additional chapters focus on student reasoning U S performance on international assessments and using construct analysis rather than percent correct on clusters of items to understand student knowledge

on specific mathematics topics Several themes emerge from the volume One is that while the rate of improvement in mathematics learning in grades 4 and 8 has slowed in recent years it has slowed more on some topics than others Another is that relatively minor changes in wording can have significant effects on student performance and thus it is difficult to be specific about what students can do without knowing exactly what questions they were asked A third theme is that changes in performance over time can sometimes but not always be understood in terms of what students are taught For example there were substantial gains on several grade 4 items requiring understanding of fractions and that is probably because the amount of instruction on fractions in grades 3 and 4 has been increasing In contrast while relatively few twelfth grade students have ever been good at factoring trinomials performance on this skill seems to be decreasing This suggests that while more students are completing advanced mathematics courses in high school these courses are not helping in the area of factoring trinomials Finally there are limitations to using NAEP as a measure of student performance on the Common Core State Standards To the extent that NAEP can be used however the NAEP data show a substantial gap between expectations and performance

Applying the Rasch Model Trevor G. Bond, Christine M. Person-Centered Outcome Metrology William P. Fisher, Jr., Stefan J. Cano, 2022-12-02 This unique collection of chapters from world experts on person centered outcome PCO measures addresses the following critical questions Can individual experiences be represented in measurements that do not reduce unique differences to meaningless uniformity How person centric are PCO measures Are PCO measurements capable of delivering the kind of quality assured quantification required for high stakes decision making Are PCO measures likely to support improved health care delivery Have pivotal clinical studies failed to deliver treatments for diseases because of shortcomings in the PCO measures used Are these shortcomings primarily matters of precision and meaningfulness Or is the lack of common languages for communicating outcomes also debilitating to quality improvement research and the health care economy Three key issues form an urgent basis for further investigation First the numbers generated by PCO measures are increasingly used as the central dependent variables upon which high stakes decisions are made The rising profile of PCO measures places new demands for higher quality information from scale and test construction evaluation selection and interpretation Second PCO measurement science has well established lessons to be learned from those who have built and established the science over many decades Finally the goal in making a PCO measurement is to inform outcome management As such it is vitally important that key stakeholders understand that over the last half century developments in psychometrics have refocused measurement on illuminating clinically important individual differences in the context of widely reproduced patterns of variation in health and functioning comparable scale values for quality improvement and practical explanatory models This book's audience includes anyone interested in person centered care including healthcare researchers and practitioners policy makers pharmaceutical industry representatives clinicians patient advocates and metrologists This is an open access book

Psychological and Social Measurement Mark Wilson, William P. Fisher, Jr., 2017-12-22 In this tribute to Benjamin Wright former students and colleagues recall the foundational contributions he made to the theory and practice of measurement in a career spanning over five decades Wright is recognized as the foremost proponent of the psychometric approach of Georg Rasch a Danish mathematician whose ideas continue to provoke controversy Wright's colleagues and students and students of their students are leaders in educational research and practice around the world This volume relates the extent of Wright's influence far beyond education and psychology where his work in measurement began into health care and the social sciences at large The editors and contributors all leading measurement scholars trace the

Patient-Centered Measurement Leah M. McClimans, 2024 Patients often are asked to fill out questionnaires before or after going to the doctor's office or hospital What is the point of these questionnaires Why do the questions often seem irrelevant Does it matter if patients fill them out or ignore them This book addresses these questions while also providing historical context about how these questionnaires became so popular These questionnaires which philosopher Leah M McClimans calls Patient Centered Measures have a fascinating history that combines the contemporary emphasis in medical ethics on patient centered care with the contemporary preoccupation with evidence based medicine the idea that medical decisions should be based on empirical evidence Patient centered measures sit between these two concerns and thus serve as an excellent example of a medical technology for the twenty first century
