Conservation Of Neotropical Forests:

Ecology and Conservation of Neotropical Montane Oak Forests Maarten Kappelle, 2006-05-18 Covers the range of natural and managed oak forests in the highlands of tropical America Providing an understanding of ecological patterns and processes that determine the structure and functioning of these forests this volume aims to serve as a basis for sustainable forest management and biodiversity conservation

Conservation of Neotropical Forests Kent Hubbard Redford, 1992 Experts from both the natural and social sciences provide vital information for understanding the interactions of forest peoples and forest resources in the lowland tropics of Central and South America They investigate patterns of traditional resource use evaluate existing research and explore new directions for furthering the conservationist agenda

Ecology and Management of Neotropical Migratory Birds Thomas E. Martin, Deborah M. Finch, 1995-10-19 The apparent decline in numbers among many species of migratory songbirds is a timely subject in conservation biology particularly for ornithologists ecologists and wildlife managers This book is an attempt to discuss the problem in full scope It presents an ambitious comprehensive assessment of the current status of neotropical migratory birds in the U S and the methods and strategies used to conserve migrant populations Each chapter is an essay reviewing and assessing the trend from a different viewpoint all written by leaders in the fields of ornithology conservation and population biology

Hunting for Sustainability in Tropical Forests John Robinson, Elizabeth L. Bennett, 2000-02-08 Throughout the world people are concerned about the demise of tropical forests and their wildlife Hunting by forest dwelling people has a dramatic effect on wildlife in many tropical forests frequently driving species to local extinction with devastating implications for other species and the health of the forests themselves But wildlife is an important source of protein and cash for rural peoples Can hunting be managed to conserve biological communities while meeting human needs Are hunting rates as practiced by tropical forest peoples sustainable If not what are the biological social and cultural implications of this failure Answering these questions is ever more important as national and international agencies seek to integrate the development of local peoples with the conservation of tropical forest systems and species This book presents a wide array of studies that examine the sustainability of hunting as practiced by rural peoples Comprising work by both biological and social scientists Hunting for Sustainability in Tropical Forests provides a balanced viewpoint on the ecological and human aspects of this hunting The first section examines the effects of hunting on wildlife in tropical forests throughout the world The next section looks at the importance of hunting to local communities The third section looks at institutional challenges of resource management while the fourth draws on economic

perspectives to understand both hunting and sustainability A final section provides synthesis and summary of the factors that influence sustainability and the implications for management Drawing on examples from Ecuador to Congo Zaire to Sulawesi Hunting for Sustainability in Tropical Forests will be a valuable resource to policymakers conservation organizations and students and scholars of biology ecology and anthropology

Movement Ecology of Neotropical Forest Mammals Rafael Reyna-Hurtado, Colin A.

Chapman, 2019-01-08 This book brings a unique perspective to animal movement studies because all cases came from tropical environments where the great diversity either biological and structurally trees shrubs vines epiphytes presents the animal with several options to fulfill its live requirements These conditions have forced the evolution of unique movement patterns and ecological strategies Movement is an essential process in the life of all organisms Animals move because they are hungry thirsty to avoid being eaten or because they want to find mates Understanding the causes and consequences of animal movement is not an easy task for behavioural ecologists Many animals are shy move in secretive ways and are very sensible to human presence therefore studying the movements of mammals in tropical environments present logistical and methodological challenges that have recently started to be solved by ecologist around the world In this book we are compiling a set of extraordinary cases where researchers have used some of the modern technology and the strongest methodological approaches to understand movement patterns in wild tropical mammals We hope this book will inspire and encourage young researchers to investigate wild mammal s movements in some of the amazing tropical environments of the world
Community Based Approaches to Wildlife Conservation in Neotropical Forests John G. Robinson, 1993

Reproductive Ecology of Tropical Forest Plants K.S. Bawa, M. Hadley, 1991-01-15 Reproductive Ecology of Tropical Forest Plants reviews recent developments in the reproductive ecology of tropical forest plants and explores the implications of current findings on forest structure function management and conservation It examines how insights gained from reproductive ecology can be helpful in the management of tropical forest resources and discusses directions of future research

Cushman, 2012-12-06 Although biologists have directed much attention to estimating the extent and causes of species losses the consequences for ecosystem functioning have been little studied This book examines the impact of biodiversity on ecosystem processes in tropical forests one of the most species rich and at the same time most endangered ecosystems on earth It covers the relationships between biodiversity and primary production secondary production biogeochemical cycles soil processes plant life forms responses to disturbance and resistance to invasion The analyses focus on the key ecological

interfaces where the loss of keystone species is most likely to influence the rate and stability of ecosystem processes

African Ethnobotany in the Americas Robert Voeks, John Rashford, 2012-09-26 African Ethnobotany in the Americas provides the first comprehensive examination of ethnobotanical knowledge and skills among the African Diaspora in the Americas. Leading scholars on the subject explore the complex relationship between plant use and meaning among the descendants of Africans in the New World. With the aid of archival and field research carried out in North America, South America, and the Caribbean, contributors explore the historical environmental and political ecological factors that facilitated hindered transatlantic ethnobotanical diffusion, the role of Africans as active agents of plant and plant knowledge transfer during the period of plantation slavery in the Americas, the significance of cultural resistance in refining and redefining plant-based traditions, the principal categories of plant use that resulted in the exchange of knowledge among Amerindian, European, and other African peoples, and the changing significance of African American ethnobotanical traditions in the 21st century. Bolstered by abundant visual content and contributions from renowned experts in the field, *African Ethnobotany in the Americas* is an invaluable resource for students, scientists, and researchers in the field of ethnobotany and African Diaspora studies.

Plant Diversity of an Andean Cloud Forest Grady L. Webster, Robert Rhode, 2001-04-26 Based on work spanning a decade, this study of the Maquipucuna area on the western slopes of the Andes discusses the climate, vegetation, ecological relationships, and flora, and emphasizes the importance of the Maquipucuna area as a biological reserve. In addition to the checklist of the flora, which enumerates 1,650 species, including 228 species of pteridophytes and over 200 species of orchids, appendices give information on floristic composition, communities, distribution of epiphytes, and elevational ranges of families and genera. The illustrations include a map, landscapes, and characteristic species.

Nontimber Forest Products in the United States Eric T. Jones, Rebecca Jean McLain, James F. Weigand, 2002 A quiet revolution is taking place in America's forests. Once seen primarily as stands of timber, our woodlands are now prized as a rich source of a wide range of commodities, from wild mushrooms and maple sugar to hundreds of medicinal plants whose uses have only begun to be fully realized. Now, as timber harvesting becomes more mechanized and requires less labor, the image of the lumberjack is being replaced by that of the forager. This book provides the first comprehensive examination of nontimber forest products (NTFPs) in the United States, illustrating their diverse importance, describing the people who harvest them, and outlining the steps that are being taken to ensure access to them. As the first extensive national overview of NTFP policy and management specific to the United States, it brings together research from numerous disciplines and analytical perspectives such as economics, mycology, history, ecology, law, entomology, forestry, geography, and anthropology in order to provide a cohesive picture of the current and potential role of NTFPs. The contributors review the state of scientific knowledge of NTFPs by offering a survey of commercial and noncommercial products, an overview of uses and users, and discussions of sustainable management issues associated with ecology, cultural traditions, forest policy, and commerce. They examine some of the major social, economic, and

biological benefits of NTFPs while also addressing the potential negative consequences of NTFP harvesting on forest ecosystems and on NTFP species populations. Within this wealth of information are rich accounts of NTFP use drawn from all parts of the American landscape from the Pacific Northwest to the Caribbean. From honey production to a review of nontimber forest economies still active in the United States such as the Ojibway harvest of plants recounted here, the book takes in the whole breadth of recent NTFP issues including ecological concerns associated with the expansion of NTFP markets and NTFP tenure issues on federally managed lands. No other volume offers such a comprehensive overview of NTFPs in North America. By examining all aspects of these products it contributes to the development of more sophisticated policy and management frameworks for not only ensuring their ongoing use but also protecting the future of our forests.
