Constructive Real Analysis:

Real Analysis Mark Bridger, 2011-10-14 A unique approach to analysis that lets you apply mathematics across a range of subjects This innovative text sets forth a thoroughly rigorous modern account of the theoretical underpinnings of calculus continuity differentiability and convergence Using a constructive approach every proof of every result is direct and ultimately computationally verifiable In particular existence is never established by showing that the assumption of non existence leads to a contradiction The ultimate consequence of this method is that it makes sense not just to math majors but also to students from all branches of the sciences The text begins with a construction of the real numbers beginning with the rationals using interval arithmetic This introduces readers to the reasoning and proof writing skills necessary for doing and communicating mathematics and it sets the foundation for the rest of the text which includes Early use of the Completeness Theorem to prove a helpful Inverse Function Theorem Sequences limits and series and the careful derivation of formulas and estimates for important functions Emphasis on uniform continuity and its consequences such as boundedness and the extension of uniformly continuous functions from dense subsets Construction of the Riemann integral for functions uniformly continuous on an interval and its extension to improper integrals Differentiation emphasizing the derivative as a function rather than a pointwise limit Properties of sequences and series of continuous and differentiable functions Fourier series and an introduction to more advanced ideas in functional analysis Examples throughout the text demonstrate the application of new concepts Readers can test their own skills with problems and projects ranging in difficulty from basic to challenging This book is designed mainly for an undergraduate course and the author understands that many readers will not go on to more advanced pure mathematics He therefore emphasizes an approach to mathematical analysis that can be applied across a range of subjects in engineering and the sciences *Constructive Real Analysis* Allen A. Constructivity in Computer Science

J.Paul Jr. Myers,Michael J. O'Donnell,1992-06-24

Mathematicians have long recognized the distinction between an argument showing that an interesting object exists and a procedure for actually constructing the object Computer science adds a new dimension of interest in constructivity since a computer program is a formal description of a constructive procedure that can be executed automatically It has been over a decade since a conference was devoted to constructivity and never before has one been held specifically relating computer science to constructivity Thus this proceedings volume is the most concentrated offering ever produced of the diverse ways in which constructivity and computer science are related The papers cover semantics and type theory logic and theorem proving real and complex analysis topology and combinatorics nonconstructive graph theoretical techniques and curriculum and pedagogic issues The book offers a concentrated view of the many ways in which constructivity has assumed importance in computer science and contains results available nowhere else

Real Analysis: A Constructive Approach Through Interval Arithmetic Mark Bridger,2019-07-05 *Real Analysis A Constructive Approach Through Interval Arithmetic* presents a careful treatment of calculus and its theoretical underpinnings from the constructivist point of view This leads to an important and unique feature of this book All existence proofs are direct so showing that the numbers or functions in question exist means exactly that they can be explicitly calculated For example at the very beginning the real numbers are shown to exist because they are constructed from the rationals using interval arithmetic This approach with its clear analogy to scientific measurement with tolerances is taken throughout the book and makes the subject especially relevant and appealing to students with an interest in computing applied mathematics the sciences and engineering The first part of the book contains all the usual material in a standard one semester course in analysis of functions of a single real variable continuity uniform not pointwise derivatives integrals and convergence The second part contains enough more technical material including an introduction to complex variables and Fourier series to fill out a full year course Throughout the book the emphasis on rigorous and direct proofs is supported by an abundance of examples exercises and projects many with hints at the end of every section The exposition is informal but exceptionally clear and well motivated throughout

Theorem Proving in Higher Order Logics Otmane Ait Mohamed,César Munoz,Sofiène Tahar,2008-07-30 This book constitutes the refereed proceedings of the 21st International Conference on Theorem Proving in Higher Order Logics TPHOLs 2008 held in Montreal

Canada in August 2008 The 17 revised full papers presented together with 1 proof pearl concise and elegant presentations of interesting examples 5 tool presentations and 2 invited papers were carefully reviewed and selected from 40 submissions The papers cover all aspects of theorem proving in higher order logics as well as related topics in theorem proving and verification such as formal semantics of specification modeling and programming languages specification and verification of hardware and software formalisation of mathematical theories advances in theorem prover technology as well as industrial application of theorem provers

Types for Proofs and Programs Paul Callaghan,Zhaohui Luo,James McKinna,Robert Pollack,2002-02-20 This book constitutes the thoroughly refereed post proceedings of the International Workshop of the TYPES Working Group TYPES 2000 held in Durham UK in December 2000 The 15 revised full papers presented were carefully reviewed and selected during two rounds of refereeing and revision All current issues on type theory and type systems and their applications to programming systems design and proof theory are addressed Efficient Algorithms

Helmut Alt,2009-08-28 This Festschrift volume published in honor of Kurt Mehlhorn on the occasion of his 60th birthday contains 28 papers written by his former Ph D students and colleagues as well as by his former Ph D advisor Bob Constable The volume s title is a translation of the title of Kurt Mehlhorn s first book Effiziente Algorithmen published by Teubner Verlag in 1977 This Festschrift demonstrates how the field of algorithmics has developed and matured in the decades since then The papers included in this volume are organized in topical sections on models of computation and complexity sorting and searching combinatorial optimization with applications computational geometry and geometric graphs and algorithm engineering exactness and robustness **An Algorithmic Approach to Nonlinear Analysis and Optimization**

Beltrami,1970-02-28 An Algorithmic Approach to Nonlinear Analysis and Optimization *Analysis for Applied Mathematics* Ward Cheney,2013-04-17 This book evolved from a course at our university for beginning graduate students in mathematics particularly students who intended to specialize in applied mathematics The content of the course made it attractive to other mathematics students and to graduate students from other disciplines such as engineering physics and computer science Since the course was designed for two semesters duration many topics could be included and dealt with in detail Chapters 1 through 6 reflect roughly the actual nature of the course as it was taught over a number of years The content of the course was dictated by a syllabus governing our preliminary Ph D examinations in the subject of applied mathematics That syllabus in turn expressed a consensus of the faculty members involved in the applied mathematics program within our department The text in its present manifestation is my interpretation of that syllabus my colleagues are blameless for whatever flaws are present and for any inadvertent deviations from the syllabus The book contains two additional chapters having important material not included in the course Chapter 8 on measure and integration is for the benefit of readers who want a concise presentation of that subject and Chapter 7 contains some topics closely allied but peripheral to the principal thrust of the course This arrangement of the material deserves some explanation Computational Logic Ulrich Berger,Helmut

Schwichtenberg, 2012-12-06 Recent developments in computer science clearly show the need for a better theoretical foundation for some central issues. Methods and results from mathematical logic in particular proof theory and model theory are of great help here and will be used much more in future than previously. This book provides an excellent introduction to the interplay of mathematical logic and computer science. It contains extensively reworked versions of the lectures given at the 1997 Marktoberdorf Summer School by leading researchers in the field. Topics covered include proof theory and specification of computation. J. Y. Girard, D. Miller, complexity of proofs and programs, S. R. Buss, S. S. Wainer, computational content of proofs, H. Schwichtenberg, constructive type theory, P. Aczel, H. Barendregt, R. L. Constable, computational mathematics, U. Martin, rewriting logic, J. Meseguer, and game semantics, S. Abramski. *Types for Proofs and Programs*. Herman Geuvers, Freek Wiedijk, 2003-08-03 These proceedings contain a refereed selection of papers presented at the Second Annual Workshop of the Types Working Group, Computer Assisted Reasoning based on Type Theory, EUIST project 29001, which was held April 24-28, 2002, in Hotel Erica Berg en Dal, close to Nijmegen, The Netherlands. The workshop was attended by about 90 researchers. On April 27, there was a special afternoon celebrating the 60th birthday of Per Martin Lof, one of the founding fathers of the Types community. The afternoon consisted of the following three invited talks: Constructive Validity Revisited by Dana Scott, From the Rules of Logic to the Logic of Rules by Jean-Yves Girard, and The Varieties of Type Theories by Peter Aczel. The contents of these contributions were not laid down in these proceedings, but the videos of the talks and the slides used by the speakers are available at <http://www.cs.kun.nl/fnds/MartinLoefDay/LoefTalks.htm>. The previous workshop of the Types Working Group under EUIST project 29001 was held in 2000 in Durham, UK. The workshops Types 2000 and Types 2002 followed a series of meetings organized in the period 1993-1999 within previous Types projects ESPRIT BRA 6435 and ESPRIT Working Group 21900. The proceedings of these earlier Types workshops were also published in the LNCS series as volumes 806, 996, 1158, 1512, 1657, 1956, and 2277. ESPRIT BRA 6453 was a continuation of ESPRIT Action 3245 Logical Frameworks: sign, Implementation and Experiments. *Formalization of Complex Analysis and Matrix Theory*. Zhiping Shi, Yong Guan, Ximeng Li, 2020-08-10 This book discusses the formalization of mathematical theories centering on complex analysis and matrix theory, covering topics such as algebraic systems, complex numbers, gauge integration, the Fourier transformation and its discrete counterpart, matrices and their transformation, inner product spaces, and function matrices. The formalization is performed using the interactive theorem prover HOL4, chiefly developed at the University of Cambridge. Many of the developments presented are now integral parts of the library of this prover. As mathematical developments continue to gain in complexity, sometimes demanding proofs of enormous sizes, formalization has proven to be invaluable in terms of obtaining real confidence in their correctness. This book provides a basis for the computer-aided verification of engineering systems constructed using the principles of complex analysis and matrix theory, as well as building blocks for the formalization of more involved mathematical theories. *Convex Analysis and Its Applications*. A.

Auslender,2012-12-06 **Convex Analysis** Ralph Tyrell Rockafellar,2015-04-29 Available for the first time in paperback R
Tyrrell Rockafellar s classic study presents readers with a coherent branch of nonlinear mathematical analysis that is
especially suited to the study of optimization problems Rockafellar s theory differs from classical analysis in that
differentiability assumptions are replaced by convexity assumptions The topics treated in this volume include systems of
inequalities the minimum or maximum of a convex function over a convex set Lagrange multipliers minimax theorems and
duality as well as basic results about the structure of convex sets and the continuity and differentiability of convex functions
and saddle functions This book has firmly established a new and vital area not only for pure mathematics but also for
applications to economics and engineering A sound knowledge of linear algebra and introductory real analysis should provide
readers with sufficient background for this book There is also a guide for the reader who may be using the book as an
introduction indicating which parts are essential and which may be skipped on a first reading
