The Law of Complex Earth and Outer Space Systems Elena Cirkovic, 2025-03-17 This book offers a paradigm shifting exploration of lawmaking for the complex interactions between Earth systems and outer space Drawing on complex systems science posthuman approaches and plural ontologies the author proposes a reimagining of law and governance for the cosmic age Through the cosmolegal

perspective this study embraces the inherent uncertainties and complexities of Earth space interactions From Arctic methane craters to orbital debris the book weaves together scientific insights landscape architecture legal theory and doctrine to address pressing environmental challenges that span Earth and beyond While legal scholarship has increasingly engaged with Earth System Science it typically treats outer space as distinct from Earth s environment However Earth s existence and complex systems are fundamentally intertwined with and emerge from outer space This book argues that a legal framework for Earth s systems needs to include outer space At its core the book advocates for a complexification of law calling for greater epistemic humility in legal thought and practice Thoughtful and provocative this work invites readers to reconsider fundamental assumptions about law nature and agency beyond the human in an era of planetary change The cosmolegal approach aims to shift legal imagination and understanding positioning human law as just one of many actors within the cosmos This original work will appeal to scholars of legal theory and environmental law as well as those interested in posthumanism ecology and materialism

Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end-of-course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license
