Earths Changing Surface Holt Science Technology Volume G:

Global Geodetic Observing System Hans-Peter Plag, Michael Pearlman, 2009-07-25 The Global Geodetic Observing System GGOS has been established by the International Association of Geodesy IAG in order to integrate the three fundamental areas of geodesy so as to monitor geodetic parameters and their temporal variations in a global reference frame with a target relative accuracy of 10 or better. These areas often called pillars deal with the determination and evolution of a) the Earth's geometry topography bathymetry ice surface sea level b) the Earth's rotation and orientation polar motion rotation rate nutation etc and c) the Earth's gravity field gravity geoid. Therefore Earth Observation on a global scale is at the heart of GGOS's activities which contributes to Global Change research through the monitoring as well as the modeling of dynamic Earth processes such as for example mass and angular momentum exchanges mass transport and ocean circulation and changes in sea land and ice surfaces. To achieve such an ambitious goal GGOS relies on an integrated network of current and future terrestrial airborne and satellite systems and technologies. These include various positioning navigation remote sensing and dedicated gravity and altimetry satellite missions global ground networks of VLBI SLR DORIS GNSS and absolute and relative gravity stations and airborne gravity mapping and remote sensing systems.
