*An Archaeology of Land Ownership* Maria Relaki, Despina Catapoti, 2013-10-23 Within archaeological studies land tenure has been mainly studied from the viewpoint of ownership A host of studies has argued about land ownership on the basis of the simple co existence of artefacts on the landscape other studies have tended to extrapolate land ownership from more indirect means Particularly noteworthy is the tendency to portray land ownership as the driving force behind the emergence of social complexity a primordial ingredient in the processes that led to the political and economic expansion of prehistoric societies The association between people and land in all of these interpretive schemata is however less easy to detect analytically Although various rubrics have been employed to identify such a connection most notable among them the concepts of cultures regions or even households they take the links between land and people as a given and not as something that needs to be conceptually defined and empirically substantiated *An Archaeology of Land Ownership* demonstrates that the relationship between people and land in the past is first and foremost an analytical issue and one that calls for clarification not only at the level of definition but also methodological applicability Bringing together an international roster of specialists the essays in this volume call attention to the processes by which links to land are established the various forms that such links take and how they can change through time as well as their importance in helping to forge or dilute an understanding of community at various circumstances

*Ancient Textile Production from an Interdisciplinary Perspective* Agata Ulanowska, Karina Grömer, Ina Vanden Berghe, Magdalena Öhrman, 2022-04-29 The diverse developments in textile research of the last decade along with the increased recognition of the importance of textile studies in adjacent fields now merit a dedicated full length publication entitled *Ancient Textile Production from an Interdisciplinary Perspective* Humanities and Natural Sciences Interwoven for our Understanding of Textiles With this volume the authors and the editors wish to illustrate to the current impact of textile archaeology on the scholarly perception of the past not limited to archaeology alone The volume presents new insights into the consumption meaning use and re use of textiles and dyes all of which are topics of growing importance in textile research As indicated by the title we demonstrate the continued importance of

interdisciplinarity by showcasing several interwoven approaches to environmental and archaeological remains textual and iconographic sources archaeological experiments and ethnographic data from a large area covering Europe and the Mediterranean Near East Africa and Asia The chronological span is deliberately wide including materials dating from c 6th millennium BCE to c mid 14th century CE The volume is organised in four parts that aim to reflect the main areas of the textile research in 2020 After the two introductory chapters Part I About this Volume and Textile Research in 2020 follow two chapters referring to dyes and dyeing technology in which analytical and material based studies are linked to contextual sources Part II Interdisciplinarity of Colour Dye Analyses and Dyeing Technologies The six chapters of Part III Interdisciplinary Approaches to Textile Tools discuss textiles and textile production starting from the analyses of tools whether functional or as representative of technological developments or user identity Archaeological and cultural contexts as well as textile traditions are the main topics of the six chapters in Part IV Traditions and Contexts Fibres Fabrics Techniques Uses and Meanings The two final chapters in Part V Digital Tools refer to the use of digital tools in textile research presenting two different case studies *Roots of Ancient Greek Civilization* Harald Haarmann, 2014-09-17

Contrary to a prevalent belief of the Western world that democracy agriculture theater and the arts were the attainments of Classical Greek civilization these were actually a Bronze Age fusion of earlier European concepts and Hellenic ingenuity This work considers both the multicultural wellspring from which these ideas flowed and their ready assimilation by the Greeks who embraced these hallmarks of civilization and refined them to the level of sophistication that defines classical antiquity
