Alvar Aalto and the Future of Architecture Robert Cody, Angela Amoia, 2022-09-09 In the contemporary practice of architecture, digital design and fabrication are emergent technologies in transforming how architects present a design and form a material strategy that is responsible, equitable, sustainable, resilient, and forward-looking. This book exposes dialogue between history, theory, design, construction, technology, and sensory experience by means of digital simulations that enhance the assessment and values of our material choices. It offers a critical look to the past to inspire the future. This new edition looks to Alvar Aalto as the primary protagonist for channeling discussions related to these topics. Architects like ALA Shigeru Ban, 3XN, Peter Zumthor, and others also play the role of contemporary guides in this review. The work of Aalto and selected contemporary architects, along with computer modeling software, showcase the importance of comprehensive design. Organized by the five Ts of contemporary architectural discourse: Typology, Topology, Tectonics, Technic, Thermodynamics, each chapter is used to connect history through Aalto and develop conversations concerning historical and contemporary models, digital simulations, ecological and passive/active material concerns, construction and fabrications, and healthy sensorial environments. Written for students and academics, this book bridges knowledge from academia into practice and vice versa to help architects become better stewards of the environment, make healthier and more accountable buildings, and find ways to introduce policy to make technology a critical component in thinking about and making architecture.

Encyclopedia of Twentieth Century Architecture R. Stephen Sennott, 2004 A balance of sophistication and clarity in the writing, authoritative entries, and strong cross-referencing that links architects and structures to entries on the history and theory of the profession make this an especially useful source on a century of the world's most notable architecture. The contents feature major architects, firms, and professional issues, buildings, styles, and sites, the architecture of cities and countries, critics, and historians, construction materials, and planning topics, schools, movements, and stylistic and theoretical terms. Entries include well-selected bibliographies and illustrations. Reference that rocks American Libraries, May 2005.

Fractal Geometry in Architecture and Design Carl Bovill, 2013-03-11 In a broad sense, Design Science is the grammar of a language of images. Rather than of words, modern communication techniques enable us to transmit and reconstitute images without needing to know a specific verbal sequence. Language such as the Morse code or Hungarian International traffic signs use international image symbols which are not specific to any particular verbal language. An image language differs from a verbal one in that the latter uses a linear string of symbols, whereas the former is multi-dimensional. Architectural renderings commonly show projections onto three mutually perpendicular planes or consist of cross sections at different altitudes, capa

ble of being stacked and representing different floor plans Such renderings make it difficult to imagine buildings comprising ramps and other features which disguise the separation between floors and consequently limit the creative process of the architect Analogously we tend to analyze natural structures as if nature had used similar stacked renderings rather than for instance a system of packed spheres with the result that we fail to perceive the system of organization determining the form of such structures Perception is a complex process Our senses record they are analogous to audio or video devices We cannot however claim that such devices perceive

The Architecture of Use Stephen Grabow, Kent Spreckelmeyer, 2014-10-03 By analyzing ten examples of buildings that embody the human experience at an extraordinary level this book clarifies the central importance of the role of function in architecture as a generative force in determining built form Using familiar twentieth century buildings as case studies the authors present these from a new perspective based on their functional design concepts Here Grabow and Spreckelmeyer expand the definition of human use to that of an art form by re evaluating these buildings from an aesthetic and ecological view of function Each building is described from the point of view of a major functional concept or idea of human use which then spreads out and influences the spatial organization built form and structure In doing so each building is presented as an exemplar that reaches beyond the pragmatic concerns of a narrow program and demonstrates how functional concepts can inspire great design evoke archetypal human experience and help us to understand how architecture embodies the deeper purposes and meanings of everyday life
