The Management of Non-Hodgkin's Lymphomas in Europe Silvio Monfardini,2012-12-06 The European School of Oncology came into existence to respond to a need for information education and training in the field of the diagnosis and treatment of cancer There are two main reasons why such an initiative was considered necessary Firstly the teaching of oncology requires a rigorously multidisciplinary approach which is difficult for the Universities to put into practice since their system is mainly disciplinary orientated Secondly the rate of technological development that impinges on the diagnosis of cancer has been so rapid that it is not an easy task for medical faculties to adapt their curricula flexibly With its residential courses for organ pathologies and its seminars on new techniques or on the principal therapeutic controversies it is the ambition of the European School of Oncology to fill a cultural and scientific gap and thereby create a bridge between the University and Industry and between these two and daily medical practice One of the more recent initiatives of the ESO is the Intercity Meetings The concept of Intercity Meetings was first put forward with the idea of creating total coverage throughout Europe of certain tumours at the forefront of research and in some cases controversy

2nd edition Dalit Barkan,Ann F. Chambers,Angélica Santiago-Gomez,2023-03-07 Metastasis is the major cause of mortality in cancer patients Metastases can be present at the time of diagnosis or can occur years or decades after the removal of the primary tumor and treatment This long latency in the manifestation of recurrent metastatic disease is explained clinically by the persistence of quiescent tumor cells that disseminated early in the course of the disease from the primary tumor to select distant organs These residing disseminated tumor cells DTCs at distant organs lay dormant and asymptomatic until reawakened to form overt metastases Importantly the quiescent nature of these hibernating DTCs facilitates their resistance to conventional therapies that target actively dividing tumor cells Therefore unraveling the biology of dormancy and reactivation of the residing DTCs to life threatening lesions is of utmost importance in order to develop new therapeutic strategies to prevent the recurrent metastatic disease from ever emerging or to better treat these recurrent cancers The mechanisms underlying the biology of tumor dormancy and their reactivation to overt metastases are just beginning to emerge thanks to a growing appreciation of the potentially chronic nature of some cancers and the development of experimental model systems for their study In this Research Topic we will follow the journey of circulating tumor cells CTCs dispatching from the primary site until their successful lodging into a new and foreign site to become DTCs We will explore the intrinsic mechanisms along with microenvironmental cues and niches that they encounter during their journey that may dictate their fate **Intraoperative Imaging and Image-Guided Therapy** Ferenc A.
