Rebecca Anne Wukasz Murray, 1982-01-01 Using artifact data collected and analyzed in 1978 from 4 sites in the Duke Point area and comparable data from other sites in the southern Gulf of Georgia region it is demonstrated that perceived differences in artifact assemblages particularly on a presence absence basis are not as clear cut as they were once considered to be Rather the significant differences lie in the relative frequencies and percentages of certain artifact types The utility of the current three part framework for archaeological analysis which has encouraged the interpretation of migration diffusion and independent invention to explain the origins and temporal variation of culture in the southern Gulf of Georgia region is critically examined Published in English **Theory, Formulation and Realization of Artifacts Science** Masayuki Matsui, 2019-02-21 This book considers and builds on the main propositions regarding body similarity and the principles of nature versus artifacts in science It also explores the design matrix power of the human Material Machine Money Information 3M I body with respect to productivity gross domestic product GDP The book begins in 2009 with Weiner s cybernetics and describes Matsui s theory and dynamism concerning the basic equation of W ZL and artifact formulation using matrix methods such as Matsui s matrix equation Matsui s ME In his book Fundamentals and Principles of Artifacts Science 3M I Body System published by Springer in 2016 the author championed the white box approach for 3M I artifacts in contrast to Simon s artificial approach from 1969 Two principles the Sandwich waist and Balancing theories and their fundamental problems were identified This book now proposes a third principle the fractal harmonic like structure of the cosmos and life types in space and time The book further elaborates on the complexity of the 3M I system and management in terms of enterprises economics nature and other applications Also the domain of nature versus artifacts is highlighted demonstrating the possibility of a white box cybernetics type robot This fosters the realization of humanized and harmonic worlds that combine increased happiness and social productivity in an age increasingly dominated by technology Agency, Norms, Inquiry, and Artifacts: Essays in Honor of Risto Hilpinen Paul McNamara, Andrew J. Vermaas, 2013-10-04 This book is concerned with two intimately related topics of metaphysics the identity of entities and the foundations of classification What it adds to previous discussions of these topics is that it addresses them with respect to human made entities that is artefacts As the chapters in the book show questions of identity and classification require other treatments and lead to other answers for artefacts than for natural entities These answers are of interest to philosophers not only for their clarification of artefacts as a category of things but also for the new light they may shed on these issue with respect to natural entities This volume is structured in three parts The contributions in Part I address basic ontological and metaphysical questions in relation to artefact kinds How should we conceive of artefact kinds Are they real kinds How are identity conditions for artefacts and artefact kinds related The contributions in Part II address meta ontological questions What exactly should an ontological account of artefact kinds provide us with What scope can it aim for Which ways of approaching the ontology of artefact kinds are there how promising are they and how should we assess this In Part III the essays offer engineering practice rather than theoretical philosophy as a point of reference The issues addressed here include How do engineers classify technical artefacts and on what grounds What makes specific classes of technical artefacts candidates for ontologically real kinds and by which criteria Federal Correctional Institution Complex, Three Rivers ,1988

Complexity Perspectives in Innovation and Social Change David Lane, Denise Pumain, Sander Ernst van der Leeuw, Geoffrey West, 2009-02-13 Innovation is nowadays a question of life and death for many of the economies of the western world Yet due to our generally reductionist scientific paradigm invention and innovation are rarely studied scientifically Most work prefers to study its context and its consequences As a result we are as a society lacking the scientific tools to understand improve or otherwise impact on the processes of invention and innovation This book delves deeply into that topic taking the position that the complex systems approach with its emphasis on emergence is better suited than our traditional approach to the phenomenon In a collection of very coherent papers which are the result of an EU funded four year international research team's effort it addresses various aspect of the topic from different disciplinary angles One of the main emphases is the need in the social sciences to move away from neo darwinist population thinking to organization

thinking if we want to understand social evolution Another main emphasis is on developing a generative approach to invention and innovation looking in detail at the contexts within which invention and innovation occur and how these contexts impact on the chances for success or failure Throughout the book is infused with interesting new insights but also presents several well elaborated case studies that connect the ideas with a substantive body of real world information
