*The Plot Machine* Kai Mikkonen, 2021-11-01 This book presents a new and exciting theory of the modern French novel by developing the notion of the narrative as a textual machine Many turn of the century French novels thematically identified their means of narration through the various machines that they depicted The narrative devices that were particularly important in this self reflection included the temporal order of the plot the question of a narrative s beginning and end the hierarchy of narrative voices and the techniques of the point of view The question of mechanization became central on all these fronts Has the novel become

automated or machine like At the same time the machine metaphors in the novels of Alfred Jarry Emile Zola Jules Verne Villiers de l'Isle Adam Raymond Roussel combined the question of the narrative form with new ways to think about man's relationship with technology and the cultural environment The early modernist texts drew upon contradictory notions of technological promise and threat while they also depicted new forms of identity and behavior related to or modeled after machines These texts highlighted cultural assumptions concerning technological innovations and critiqued mainly through parody and through various figures of man-machine fusion the positivistic belief in progress Such writers looked for evidence of advanced forms of consciousness arising out of encounters with new technology such as telephones trains bicycles telegraphy phonographs and electricity This volume will be of interest to anyone working in the field of modern French literary and cultural history It will especially appeal to anyone intrigued with the origins of the modernist novel the history of narrative forms and the question of how the experience of new technology may be portrayed in literary texts *The New Routledge Companion to Science Fiction* Mark Bould, Andrew M. **From Gutenberg to the Internet** Jeremy M. Norman, 2005 From Gutenberg to the Internet presents 63 original readings from the history of computing networking and telecommunications arranged thematically by chapters Most of the readings record basic discoveries from the 1830s through the 1960s that laid the foundation of the world of digital information in which we live These readings some of which are illustrated trace historic steps from the early nineteenth century development of telegraph systems the first data networks through the development of the earliest general purpose programmable computers and the earliest software to the foundation in 1969 of ARPANET the first national computer network that eventually became the Internet The readings will allow you to review early developments and ideas in the history of information technology that eventually led to the convergence of computing data networking and telecommunications in the Internet The editor has written a lengthy illustrated historical introduction concerning the impact of the Internet on book culture It compares and contrasts the transition from manuscript to print initiated by Gutenberg's invention of printing by moveable type in the 15th century with the transition that began in the mid 19th century from a print centric world to the present world in which printing co exists with various electronic media that converged to form the Internet He also provided a comprehensive and wide ranging annotated timeline covering selected developments in the history of information technology from the year 100 up to 2004 and supplied introductory notes to each reading Some introductory notes contain supplementary illustrations

**The Evolution of Technology** George Basalla, 1989-02-24 This book presents an evolutionary theory of technological change based upon recent scholarship in the history of technology and upon relevant material drawn from economic history and anthropology It challenges the popular notion that technology advances by the efforts of a few heroic individuals who produce a series of revolutionary inventions owing little or nothing to the technological past Therefore the book's argument is shaped by analogies taken selectively from the theory of organic

evolution and not from the theory and practice of political revolution Three themes appear and reappear with variations throughout the study The first is diversity an acknowledgment of the vast numbers of different kinds of made things artifacts that have long been available to humanity the second is necessity the belief that humans are driven to invent new artifacts in order to meet basic biological requirements such as food shelter and defense and the third is technological evolution an organic analogy that explains both the emergence of novel artifacts and their subsequent selection by society for incorporation into its material life without invoking either biological necessity or technological progress Although the book is not intended to provide a strict chronological account of the development of technology historical examples including many of the major achievements of Western technology the waterwheel the printing press the steam engine automobiles and trucks and the transistor are used extensively to support its theoretical framework The Evolution of Technology will be of interest to all readers seeking to learn how and why technology changes including both students and specialists in the history of technology and science

The First Computers Raul Rojas,Ulf Hashagen,2002-07-26 This history of computing focuses not on chronology what came first and who deserves credit for it but on the actual architectures of the first machines that made electronic computing a practical reality The book covers computers built in the United States Germany England and Japan It makes clear that similar concepts were often pursued simultaneously and that the early researchers explored many architectures beyond the von Neumann architecture that eventually became canonical The contributors include not only historians but also engineers and computer pioneers An introductory chapter describes the elements of computer architecture and explains why being first is even less interesting for computers than for other areas of technology The essays contain a remarkable amount of new material even on well known machines and several describe reconstructions of the historic machines These investigations are of more than simply historical interest for architectures designed to solve specific problems in the past may suggest new approaches to similar problems in today s machines Contributors Titiimaea F Ala ilima Lin Ping Ang William Aspray Friedrich L Bauer Andreas Brennecke Chris P Burton Martin Campbell Kelly Paul Ceruzzi I Bernard Cohen John Gustafson Wilhelm Hopmann Harry D Huskey Friedrich W Kistermann Thomas Lange Michael S Mahoney R B E Napper Seiichi Okoma Hartmut Petzold Ra l Rojas Anthony E Sale Robert W Seidel Ambros P Speiser Frank H Sumner James F Tau Jan Van der Spiegel Eiti Wada Michael R Williams

**Magical Thinking** Stuart McWilliams,2011-12-08 How do we write about magic Responding to a renewed interest in the history of the occult this volume examines the role of magic in a series of methodological controversies in the humanities In case studies ranging from the necromancy of historiography to the strident rationalism of the New Atheism Magical Thinking sets out the surprising ways in which scholars and critics have imagined the occult The volume argues that thinking and writing about magic has engendered multiple epistemological crises profoundly unsettling the understanding of history and knowledge in Western culture By examining how scholarly writing has contended and conspired with discourses of enchantment the book reveals

the implications of magic and its scholarship for intellectual history

*Kafka* Gilles Deleuze,1986 In *Kafka* Deleuze and Guattari free their subject from his misinterpreters In contrast to traditional readings that see in Kafka's work a case of Oedipalized neurosis or a flight into transcendence guilt and subjectivity Deleuze and Guattari make a case for Kafka as a man of joy a promoter of radical politics who resisted at every turn submission to frozen hierarchies

*Between Modernism and Conceptual Art* Robert C. Morgan,1997-07-01 Art criticism in the 1980s was highly influenced by market forces that somewhat changed the face of the art world A mediocre show purchased by a wealthy investor or collector received disproportionate coverage in the New York press particularly those glossy four color journals that were highly dependent upon the advertising dollars of galleries auction houses vodka companies airlines and fashion designers Lost in the coverage of market driven art was that it was not necessarily the most advanced or even the most significant work of the decade This work provides an alternative viewpoint to the general American cultural discourse of the 1980s showing that the real situation was not the exclusionary rhetoric of Postmodernism but was instead the conflict between late Modernism and Conceptual Art The 24 essays range from discussions on Joseph Beuys and Allan Kaprow to studies of French artist Tania Mouraud and Polish artist Jan Zakrzewski It also includes a lengthy commentary on art and technology along with a look at performance and installation art
