Of Scientific Discovery:

Scientific Discovery in the Social Sciences Mark Addis, Peter C. R. Lane, Peter D. Sozou, Fernand Gobet, 2019-09-12

This volume offers selected papers exploring issues arising from scientific discovery in the social sciences. It features a range of disciplines including behavioural sciences, computer science, finance and statistics, with an emphasis on philosophy. The first of the three parts examines methods of social scientific discovery. Chapters investigate the nature of causal analysis, philosophical issues around scale development in behavioural science, research imagination in social scientific practice, and relationships between paradigms of inquiry and scientific fraud. The next part considers the practice of social science discovery. Chapters discuss the lack of genuine scientific discovery in finance, where hypotheses concern the cheapness of securities, the logic of scientific discovery in macroeconomics, and the nature of that what discovery with the Solidarity movement as a case study. The final part covers formalising theories in social science. Chapters analyse the abstract model theory of institutions as a way of representing the structure of scientific theories, the semi-automatic generation of cognitive science theories, and computational process models in the social sciences. The volume offers a unique perspective on scientific discovery in the social sciences. It will engage scholars and students with a multidisciplinary interest in the philosophy of science and social science.

Scientific Discovery George Gore, 2015-06-25. Excerpt from *The Art of Scientific Discovery*. Or the General Conditions and Methods of Research in Physics and Chemistry. The object of the following treatise is to describe the nature of original Scientific Research, the chief personal conditions of success in its pursuit, the general methods by which discoveries are made in Physics and Chemistry, and the causes of failure, and thus to elucidate so far as possible the special mental conditions and processes by means of which the mind of man ascends from the known to the unknown in matters of science. Some of the conditions described are such as I have in my own experience found to be necessary, and some of the methods are those I have frequently employed in my own researches. Cohen, Guido Cimino, 2012-12-06 The 1977 lectures of the International School for the History of Science at Erice in Sicily were devoted to that vexing but inexorable problem the nature of scientific discovery With all that has been written by scientists themselves by historians and philosophers and social theorists by psychologists and psychiatrists by logicians and novelists the problem remains elusive Happily we are able to bring the penetrating lectures from Erice that summer to a wider audience in this volume of theoretical investigations and detailed case studies The ancient and lovely town of Erice in Northwest Sicily 750 m above the sea was famous throughout the Mediterranean for its temple of the goddess of nature Venus Erycina said to have been built by Daedalus As philosophers and historians of the natural sciences we hope that the stimulating atmosphere of Erice will to some extent be transmitted by these pages We are especially grateful to that generous and humane physician and historian of science Dr Vincenzo Cappelletti himself a creative scientist for his collaboration in bringing this work to completion We admire his intelligent devotion to fostering creative interaction between scientists and historians of science as Director of the School of History of Science within the great Ettore Majorana Centre for Scientific Culture at Erice as well as for his imaginative leadership of the Istituto della Enciclopedia Italiana **The Book of Scientific Discovery** Dorothy Mabel Turner, 1933 **History of Scientific Discovery** Arthur Jack Meadows, 1989-12-01 **The Art of Scientific Discovery** George Gore Gore, 2022-10-27 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant Scientific Discovery: Case Studies Thomas Nickles, 1980-09-30 The history of science is articulated by moments of discovery Yet these moments are not simple or isolated events in science Just as a scientific discovery illuminates our understanding of nature or of society and reveals new connections among phenomena so too does the history of scientific

activity and the analysis of scientific reasoning illuminate the processes which give rise to moments of discovery and the complex network of consequences which follow upon such moments. Understanding discovery has not been until recently a major concern of modern philosophy of science. Whether the act of discovery was regarded as mysterious and inexplicable or obvious and in no need of explanation, modern philosophy of science in effect bracketed the question. It concentrated instead on the logic of scientific explanation or on the issues of validation or justification of scientific theories or laws. The recent revival of interest in the context of discovery indeed in the acts of discovery on the part of philosophers and historians of science represents no one particular methodological or philosophical orientation. It proceeds as much from an empiricist and analytical approach as from a sociological or historical one from considerations of the logic of science as much as from the logical or extralogical contexts of scientific thought and practice. But in general this new interest focuses sharply on the actual historical and contemporary cases of scientific discovery and on an examination of the act or moment of discovery in situ.
