Bleeker,Johannes Geiss,M. Huber,2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field Hence at this point in history we are in a unique position to gain first hand insight into the field and its development To this end The Century of Space Science a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century The level is academic and focuses on key discoveries how these were arrived at their scientific consequences and how these discoveries advanced the thoughts of the key players involved With over 90 world class contributors such as James Van Allen Cornelis de Jager Eugene Parker Reimar L st and Ernst Stuhlinger and with a Foreword by Lodewijk Woltjer past ESO Director General this book will be immensely useful to readers in the fields of space science astronomy and the history of science Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection *Giant Planets of Our Solar System* Patrick Irwin,2003 This book reviews the current state of knowledge of the atmospheres of the giant gaseous planets Jupiter Saturn Uranus and Neptune The current theories of their formation are reviewed and their recently observed temperature composition and cloud structures

are contrasted and compared with simple thermodynamic radiative transfer and dynamical models The instruments and techniques that have been used to remotely measure their atmospheric properties are also reviewed and the likely development of outer planet observations over the next two decades is outlined
