Of Altruism:

The Ethics of Altruism, 2004 The Ethics of Altruism Jonathan Seglow, 2004-02-19 The chief problem of human life wrote Auguste Comte is the subordination of egoism to altruism This collection examines the nature and value of altruism as a moral virtue restoring it to its proper place at the centre of our moral and political thinking The first five essays in the collection explore the relationship between altruism and other moral concepts such as self interest autonomy community and impartiality The five essays in the second part show how altruism is invoked in practical moral problems including aid to developing countries the market for human body parts multiculturalism and the politics of recognition and medical ethics Through these discussions the central role of altruism in moral thinking is brought into sharper focus **The Invention of Altruism** Thomas Dixon, 2008-05-08 This volume explores how Victorian philosophers scientists clergymen and novelists debated the meaning of the new term altruism Including a reappraisal of Charles Darwin s ideas and insights into the rise of popular socialism this study is highly relevant to contemporary debates about altruism evolution religion and ethics **The Heart of Altruism** Kristen Renwick Monroe, 1998-07-21 Is all human behavior based on self interest Many social and biological theories would argue so but such a perspective does not explain the many truly heroic acts committed by people willing to risk their lives to help others Kristen Monroe boldly lays the groundwork for a social theory toward altruism by examining the experiences described by altruists themselves **The Limits of Altruism in Democratic Athens** Matthew Robert Christ, 2012-10-08 Examines the behavior of Athenians in the classical period arguing that Athenians felt little pressure as individuals to help fellow citizens **Origins of Altruism and Cooperation** Robert W. Sussman, C. Robert Cloninger, 2011-08-02 This book is about the evolution and nature of cooperation and altruism in social living animals focusing especially on non human primates and on humans Although cooperation and altruism are often thought of as ways to attenuate competition and aggression within groups or are related to the action of selfish genes there is increasing evidence that these behaviors are the result of biological mechanisms that have developed through natural selection in group living species This evidence leads to the conclusion that cooperative and altruistic behavior are not just by products of competition but are rather the glue that underlies the ability for primates and humans to live in groups The anthropological primatological paleontological behavioral neurobiological and psychological evidence provided in this book gives a more optimistic view of human nature than the more popular conventional view of humans being naturally and basically aggressive and warlike Although competition and aggression are recognized as an important part of the non human primate and human behavioral repertoire the evidence from these fields indicates that cooperation and altruism may represent the more typical normal and healthy behavioral pattern The book is intended both for the general reader and also for students at a variety of levels graduate and undergraduate it aims to provide a compact accessible and up to date account of the current scholarly advances and debates in this field of study and it is designed to be used in teaching and in discussion groups The book

Pope,1995-04-01 In this book Stephen J Pope argues that contemporary scientifically based theories of the evolution of altruism provide important insights into one of the fundamental moral problems of Christian ethics the natural basis of love and its ordering He explores the contributions evolutionary theory makes to our understanding of the biological foundations of kin preference and reciprocal care the limits of love and the need for an ordering of love issues relevant to any ethic that accords a central role to the deeply natural affections found in friendship marriage and the family He proposes that understanding human nature in its broader evolutionary context brings to ethics a needed balance between the personal and biological dimensions of human nature In the context of Catholic ethics Pope points out functional similarities between Thomas Aquinas s use of then available scientific theories in his interpretation of the natural basis of primary relationships and Pope s own efforts to avoid the deficiencies that characterize contemporary Catholic interpretations of love based on personalism and existentialism He concludes with a call for a multidimensional interpretation of love one that incorporates scientifically based theories about human nature together with an appreciation of the significance of motives intentions and freedom for the ordering of human affections and moral responsibility This book will be of interest to moral theologians especially those concerned with the topics of love justice and natural law ethics
