V. Manoj Kumar,2020-06-23 This book covers the area of tribology broadly providing important introductory chapters to fundamentals processing and applications of tribology The book is designed primarily for easy and cohesive understanding for students and practicing scientists pursuing the area of tribology with focus on materials This

book helps students and practicing scientists alike understand that a comprehensive knowledge about the friction and wear properties of advanced materials is essential to further design and development of new materials. The description of the wear micromechanisms of various materials will provide a strong background to the readers as how to design and develop new tribological materials. This book also places importance on the development of new ceramic composites in the context of tribological applications. Some of the key features of the book include: Fundamentals section highlights the salient issues of ceramic processing and mechanical properties of important oxide and non oxide ceramic systems. State of the art research findings on important ceramic composites are included and an understanding on the behavior of silicon carbide SiC based ceramic composites in dry sliding wear conditions is presented as a case study. Erosion wear behavior of ceramics in which case studies on high temperature erosion behavior of SiC based composites and zirconium diboride ZrB₂ based composites is also covered. Wear behavior of ceramic coatings is rarely discussed in any tribology related books therefore a case study explaining the abrasion wear behavior of WC Co coating is provided. Finally an appendix chapter is included in which a collection of several types of questions including multiple choice short answer and long answer are provided.

Novel Colloidal Forming of Ceramics Jinlong Yang, Yong Huang, 2020-01-28 This book discusses several new near net shape techniques for fabricating highly reliable high performance complex ceramic parts. In the context of materials design the creation of high performance ceramic products of desired shapes has led to the need for new ceramic forming processes. The near net shape techniques combine both injection molding and colloidal forming processes. Reviewing and summarizing the research and latest advances the book is divided into 6 parts: 1 the basic theory development and application of the colloidal injection molding of ceramics 2 the tape casting technology 3 the reliability of the product 4 the colloidal injection molding of Si₃N₄ and SiC 5 low toxicity systems and 6 the novel in situ coagulation casting of ceramic suspensions via controlled release of high valence counter ions and dispersant removal. It is intended for researchers and graduates in materials science and engineering.
