Corneal Sensitivity Measurement And Clinical Importance:

Corneal Sensitivity Jörg Draeger, 2012-12-06 We in ophthalmology are fortunate to be able to measure quantitatively many aspects of ocular morphology and visual function These measurements are either objective e g electroretinography tonometry electromyography visually evoked responses etc or subjective and psychophysical e g visual acuity visual fields color vision etc One aspect of corneal physiology and pathology which has so far escaped careful and reliable measurements is corneal sensitivity Previous attempts have been rather crude and can be compared to measuring intraocular pressure by digital compression Professor Draeger has for the last decade and a half directed his attention to the question of esthesiometry of the cornea He has a gift for constructing and devising new ingenious ocular instruments His handheld tonometer is a splendid example He has now applied the principle of this instrument to the new electronic optical esthesiometer In many publications he has reported on his first results using this modern technique to study corneal physiology and evaluate certain pathologic conditions In this monograph Professor Draeger has collected all of his material and reports on his long experience The usefulness of this instrument is just beginning to be appreciated It is obvious that this new measuring device will help us in the fitting of contact lenses evaluating herpes simplex infections of the cornea follow the postoperative course of patients with a penetrating keratoplasty etc **Corneal Sensitivity** M. Merte, 2013-06-29 After a compound and its various effects or as the case may be any particular one of these have been discovered there is still a long way ahead until it is

available for use in daily practice as a finished product Before reaching the doctor the substance is examined by chemists pharmacologists and pharmacists just to mention a few of the most important stages in a whole research sequence Before the drug is finally made available on the market the findings resulting from animal experiments must be confirmed in clinical studies The expectations involved in its development must be met and sufficient evidence has to be established as to the drug s effects and side effects indications and contraindications and the questions of safe use and appropriate dosage Only then may the drug be registered and introduced to the market In this respect Metipranolol eye drops which have recently been launched on the market formed no exception and had likewise to go through all these various stages A series of investigators at many different centers participated in this procedure and at the invitation of the manufacturers Messrs Dr Gerhard Mann they assembled for discussions at a symposium held in Berlin in January 1983 and reported on the substance and their experiences with it **Vision: Structure And Function** Kwok-fai So,David Tai Wai Yew,David Sau Cheuk
