Coronary Angioplasty and Intracoronary Thrombolysis M. Kaltenbach,A. Grüntzig,K. Rentrop,W.-D.

Bussmann,2012-12-06 This volume contains the proceedings of the Fourth International Symposium on Coronary Heart Disease held in Frankfurt Federal Republic of Germany In 1970 when the first symposium was held the whole range of diagnostic and therapeutic measures was covered but since then interest in coronary heart disease has increased so considerably that the fourth symposium was restricted to only two therapeutic aspects angioplasty and intracoronary thrombolysis It can be noted with pleasure that European cardiologists namely Andreas Grüntzig and Peter Rentrop have made essential contributions to the applicability of these modes of treatment When angioplasty was first discussed at the Third International Symposium Coronary Heart Disease Stuttgart 1978 a great deal of astonishment was expressed Today the procedure has gained an important place in the treatment of angina pectoris The proportion of candidates for coronary surgery in whom angioplasty can be attempted instead of operation is around 10% in certain subgroups even higher The most remarkable finding of our 5 year experience with angioplasty are the extremely good long term results Recurrences happen in about 15% 20% of cases within the first 3 months after this period of time recurrences are very unusual and mostly due to progression of the disease at other sites Angioplasty has thus also contributed to our understanding of the dynamics of the atherosclerotic process **Computed Tomography of the Coronary Arteries** Pim J. de Feyter,G. P.

cardiac computed tomography have occurred We now can legitimately claim that computed tomography angiography CTA of the coronary arteries is available In the evaluation of patients with suspected coronary artery disease CAD many guidelines today consider CTA an alternative to stress testing The use of CTA in primary prevention patients is more controversial in considering diagnostic test interpretation in populations with a low prevalence to disease However the nuclear technique most frequently used by cardiologists is myocardial perfusion imaging MPI The combination of a nuclear camera with CTA allows for the attainment of coronary anatomic cardiac function and MPI from one piece of equipment PET SPECT cameras can now assess perfusion function and metabolism Assessing cardiac viability is now fairly routine with these enhancements
