Coronary Laser Angioplasty K.R. Karsch, K.K. Haase, 2013-03-09 Since the development of the first laser generator by Maiman in 1960 laser energy has gained increased interest and has subsequently been used in various fields of application. Due to its high energy density combined with a sharply defined irradiation field laser has aroused great expectations especially since laser beams have been used very successfully in various fields especially technology and medicine. Medical and surgical applications of the laser were among the first and have been of undisputed benefit in for example ophthalmologic interventions such as coagulation of the retina or for endoscopic tumorectomy in the bronchial gastrointestinal and urogenital tracts. Consequently considerable research effort was made to also apply laser techniques in interventional cardiology for the treatment of atherosclerosis aimed at removing plaque material from stenosed tissue or occluded arteries and recanalizing tough and calcified segments unsuitable for the well established technique of balloon dilatation. Ablating atheroma rather than pushing it aside was thought to achieve better results. However it was found that the laser may create rough edged cuts partly with substantial thermal or mechanical damage to the surrounding tissue consequently provoking preconditions for unwanted restenosis. Different types of laser generators and probes have therefore been investigated in arterial vessels mostly focusing on indirect laser effects. Intravascular probes with laser heated metal tips were used as well as balloon catheters with an incorporated laser fiber designed to heat the surrounding tissue outside the balloon and to in effect iron out the plaque.

interventional cardiology while also serving as a refresher to early career interventional cardiologists. The key objective is to equip the reader with an evidence based expert led resource focussed primarily on pre procedural planning, peri procedural decision making and the salient technical aspects of performing safe and effective coronary intervention, the intention being to support the therapeutic decision making process in the emergency room, coronary care unit or cath lab in order to optimize patient outcome. The Interventional Cardiology Training Manual provides readers with a step by step guide to the basic principles underpinning coronary intervention and facilitates rapid access to best practice from the experts presented in a pragmatic, digestible and concise format. Uniquely, each chapter has been written in a heart center specific manner, affording the reader an opportunity to learn how individual institutions perform a specific procedure, which algorithms and guidelines they follow and what evidence they draw on to instigate the best possible care for their patients.

Lasers in Cardiovascular Medicine and Surgery: Fundamentals and Techniques George S. Abela, 2012-12-06 Following the advent of percutaneous balloon valved and are available for clinical use as well as angioplasty, interventional cardiovascular procedures that are still in investigational phases have become of great interest to the clinical case reports are presented by expert interventional cardiologists, radiologists and cardiovascular investigators on the use of various catheter systems. One of the most extensively explored in the coronary and peripheral circulation alternatives to bypass surgery is laser mediated atherectomy. Part V Chapters 17-23 is the most up to date review of the clinical experience with various laser delivery systems. There is an emphasis but has also burdened it with unrealistic expectations on patient selection criteria for lesion choice. Many commercial laser systems are available and follow up data is presented for which often makes the choice of a laser system the various systems in the clinical setting.

Textbook of Cardiovascular Intervention Craig A. Thompson, 2013-11-19 The field of interventional cardiology and interventional vascular medicine now comprises the dominant diagnostic and therapeutic field within cardiovascular medicine and continues to grow in terms of patients managed and physicians trained. The Textbook of Cardiovascular Intervention is intended to provide a modern comprehensive and practical text on interventional cardiology for the current rapidly evolving practice environment. It is written by a group of worldwide experts in the field and will appeal to fellows, residents and physicians in cardiology, interventional cardiology, cardiothoracic and vascular surgery, vascular and endovascular medicine, neurointerventional radiology and surgery, emergency medicine and intensive care.

Lasers in Medicine Ronald W. Waynant, 2011-12-20 The use of lasers in medical practice has dramatically increased over the years. Lasers and modern optics have largely been unexplored in medical science. This contributed work is both optimistic and cautionary in its expert evaluation of the state of the art medical use of laser technology. The use of lasers to improve upon conventional practice is

Interventional Techniques in Cardiovascular Medicine Vinzenz Hombach, M. Kochs, A. J. Camm, 2012-12-06 Since the introduction of balloon angioplasty for the relief of coronary artery stenoses and of anginal symptoms in patients with coronary artery disease by Andreas Grüntzig in 1977 the field of interventional technology and treatment strategies has grown enormously For the reduction of hemodynamically significant coronary artery stenoses balloon angioplasty is the standard and reference method with a high primary success and low complication rate Because of the relatively high recurrence rates of 30-40% of balloon angioplasty a whole family of different angioplasty techniques has been developed since then Among those are atherectomy devices laser angioplasty radiofrequency angioplasty high and low speed rotational angioplasty and stenting of stenosed vessels Balloon angioplasty has been extended to aortic and mitral valve stenoses and supraventricular and ventricular tachycardias can now be treated by catheter ablation techniques In 1989 an International Symposium on standard and newer interventional techniques has been held at the University of Ulm This volume contains the essential parts and presentations of the international faculty of experts in the field In four chapters the principles advantages pitfalls and future developments of coronary angioplasty angioplasty of peripheral arteries balloon valvuloplasty and of catheter ablation of supraventricular and ventricular tachycardias are described in detail We hope that this State of the Art representation will be of great value for both the non expert reader and the active researcher in the fields addressed within the book V Hombach M Kochs and A J Camm ix List of contributors U U
