Alternating Copolymers:

Alternating Copolymers J.M.G. Cowie, 2013-06-29 Examination of the early literature attests to the fact that the study of copolymerization was initiated when polymer science was in its infancy. It has continued to grow to a subject of major importance and has been a source of interest to both academic and industrialist alike. The wide spectrum of structures and properties available in the statistical copolymer has made this a fruitful field of exploration but one particular and more restricted form which has held its own fascination for many is the limiting case of the strictly alternating copolymer. This is formed in the ideal situation when two monomers in a reaction mixture add consecutively to create a polymer chain with a regular ABABAB structure irrespective of the monomer feed ratio. When this happens the resulting copolymer will always have the same composition a feature which can be advantageous but also somewhat restrictive as the ability to vary the properties is then limited. Within a series entitled *Speciality Polymers* it seems appropriate then to deal with this subject particularly as no previous attempt has been made to draw together the various facets of alternating copolymerization into one volume. It also seems timely to present a more unified picture of the subject which will also illustrate the progress made.

The contents of the book have been conveniently divided into two general parts: Physical States of Polymers and Characterization Techniques. Written by seven of the leading figures in the polymer science community, this third edition has been thoroughly updated and expanded. As in the second edition, all of the chapters contain general introductory material and comprehensive literature citations designed to give newcomers to the field an appreciation of the subject and how it fits into the general context of polymer science. Containing numerous problem sets and worked examples, this third edition provides enough core material for a one semester survey course at the advanced undergraduate or graduate level. **Crystallization of**

Polymers: Volume 1, Equilibrium Concepts Leo Mandelkern, 2002-09-19 First published in 2002 from an original 1964 edition in the *Crystallization of Polymers* 2nd edition, Leo Mandelkern provides a self-contained treatment of polymer crystallization. All classes of macromolecules are included and the approach is through the basic disciplines of chemistry and physics. The book discusses the thermodynamics and physical properties that accompany the morphological and structural changes that occur when a collection of molecules of very high molecular weight are transformed from one state to another. Volume 1 is a presentation of the equilibrium concepts that serve as a basis for the subsequent volumes. In this volume the
