Victorov, 2015-01-05 The current volume provides examples of how environmental hazards such as landslides earthquakes mountain processes cold climate processes and tidal flows and currents can affect the energy supply infrastructure In times of uncertainty the security of the European cross border energy supply infrastructure such as pipelines has great importance Whilst the potential effects of political disagreement economic inequalities and social differences are relatively well understood the impact of environmental change is often poorly appreciated by decision makers New approaches have been examined for monitoring of hazardous landslide processes including early warning systems and near real time 3D data processing and visualization The scientific problems of environmental systems design have been discussed and approaches for their implementation have been suggested New integrated remote sensing techniques consisting mainly of hyperspectral and radar imagery are presented together with the processing of monitoring data using GIS techniques and in particular dynamic visualization Attention is
