Dynamics of disparity has been studied by analysing the sigma convergence, beta unconditional convergence, beta conditional convergence and club convergence approaches. Using panel data model, the role of technological, informational, institutional infrastructure and idiosyncratic factors has been examined as determinant of temporal and spatial differentials in agriculture development in the state.

Money-Go-Rounds Shirley Ardener, Sandra Burman, 2024-11-01. On most continents from the USA to Africa and Asia, various forms of rotating savings and credit associations (ROSCAs) serve men and women of the community often as their major and sometimes their only savings institution. ROSCAs are self-help money pooling associations with participants who agree to make regular contributions to a fund which is given in whole or in part to each contributor in rotation. Many ROSCAs have elaborate systems to cope with inflation, default and the distribution of benefits. In providing important social and welfare resources, they constitute valuable social capital. This unique volume of case studies by an international group of experts which examines ROSCAs on a worldwide basis will be of interest to anyone studying or concerned with anthropology, economics, women's issues and especially the welfare of the less developed countries and immigrant communities in the West.
