Bombing To Win Air Power And Coercion In War Cornell Studies In Security Affairs:

Bombing to Win Robert A. Pape, 1996-04-18 From Iraq to Bosnia to North Korea the first question in American foreign policy debates is increasingly Can air power alone do the job Robert A Pape provides a systematic answer Analyzing the results of over thirty air campaigns including a detailed reconstruction of the Gulf War he argues that the key to success is attacking the enemy's military strategy not its economy people or leaders Coercive air power can succeed but not as cheaply as air enthusiasts would like to believe Pape examines the air raids on Germany Japan Korea Vietnam and Iraq as well as those of Israel versus Egypt providing details of bombing and governmental decision making His detailed narratives of the strategic effectiveness of bombing range from the classical cases of World War II to an extraordinary reconstruction of airpower use in the Gulf War based on recently declassified documents In this now classic work of the theory and practice of airpower and its political effects Robert A Pape helps military strategists and policy makers judge the purpose of various air strategies and helps general readers understand the policy debates *Taiwan's Security and Air Power* Martin

Edmonds, Michael Tsai, 2003-10-23 Recent concern about mainland China's intentions towards Taiwan and more general concern about the risk of instability in the region has led to growing interest in Taiwan's military strategy This book brings together a range of experts from the West and from Taiwan itself who examine the key issues connected with Taiwan's air power which is a **Lethality, Legality, and Reality** Timothy M. Cullen, 2008 This study evaluates the potential for non lethal weapons to become viable tools for the air support of ground forces in military conflicts During the Cold War the US Air Force developed conventional air support aircraft and munitions to fight Soviet mechanized infantry and armor in the central plains of Europe Since the end of the Cold War the United States increasingly confronts adversaries in situations where it is not in the national interest to use destructive force In response to this new security environment the Department of Defense has established the Joint Non Lethal Weapons Program and deployed a myriad of non lethal devices to conflicts around the world All non lethal weapons in the US armed forces however are ground weapons and are severely limited in range Aircraft could provide the perspective and added range joint force commanders desire thus this thesis explores the potential for aircraft to provide non lethal force options Abstract **The Concept of Military Objectives in International Law and Targeting Practice** Agnieszka Jachec-Neale, 2014-10-24 The concept that certain objects and persons may be legitimately attacked during armed conflicts has been well recognised and developed through the history of warfare This book explores the relationship between international law and targeting practice in determining whether an object is a lawful military target By examining both the interpretation and its post ratification application this book provides a comprehensive analysis of the definition of military objective adopted in 1977 Additional Protocol I to the four 1949 Geneva Conventions and its use in practice Tackling topical issues such as the targeting of TV and radio stations or cyber targets Agnieszka Jachec Neale analyses the concept of military objective within the context of both modern military doctrine and the major coalition

operations which have been undertaken since it was formally defined This monograph will be of great interest to students and scholars of international law and the law of armed conflict as well as security studies and international relations *Air Power in UN Operations* A. Walter Dorn, 2016-03-23 Air power for warfighting is a story that has been told many times Air power for peacekeeping and UN enforcement is a story that desperately needs to be told For the first time this volume covers the fascinating range of aerial peace functions In rich detail it describes aircraft transporting vital supplies to UN peacekeepers and massive amounts of humanitarian aid to war affected populations aircraft serving as the eyes in sky to keep watch for the world organization and combat aircraft enforcing the peace Rich poignant case studies illuminate the past and present use of UN air power pointing the way for the future This book impressively fills the large gap in the current literature on peace operations on the United Nations and on air power generally **The Myth of Inevitable US Defeat in Vietnam** Dale Walton, 2013-01-11 This book offers a dispassionate strategic examination of the Vietnam conflict that challenges the conventional wisdom that South Vietnam could not survive as an independent non communist entity over the long term regardless of how the United States conducted its military political effort in Indochina **Elements of Deterrence** Erik Gartzke, Jon R. Lindsay, 2024 Global politics in the twenty first century is complicated by dense economic interdependence rapid technological innovation and fierce security competition How should governments formulate grand strategy in this complex environment Many strategists look to deterrence as the answer but how much can we expect of deterrence Classical deterrence theory developed in response to the nuclear threats of the Cold War but strategists since have applied it to a variety of threats in the land sea air space and cyber domains If war is the continuation of politics by other means then the diversity of technologies in modern war suggests a diversity of political effects Some military forces or postures are most useful for winning various kinds of wars Others are effective for warning adversaries of consequences or demonstrating resolve Still others may accomplish these goals at lower political cost or with greater strategic stability Deterrence is not a simple strategy therefore but a complex relationship between many ends and many means This book presents findings from a decade long research program on cross domain deterrence Through a series of theoretical and empirical studies we explore fundamental trade offs that have always been implicit in practice but have yet to be synthesized into a general theory of deterrence Gartzke and Lindsay integrate newly revised and updated versions of published work alongside new work into a holistic framework for understanding how deterrence works or fails to work in multiple domains Their findings show that in deterrence all good things do not go together *Continental Powers and Naval Development* Brian C. Chao, 2025-10-16 This book examines how continental great powers have attempted to develop and wield strong navies since 1801 Continental Powers and Naval Development argues that a continental great power's ability to build and effectively use a strong navy is greatly affected by two factors a naval force design capable of executing national strategy strategy coherence and the deployment of that navy to places or for purposes that minimize the dominant naval power's

threat perception threat diffusion Each factor is deceptively difficult for a continental great power to achieve but through an analysis of four historical case studies this book shows how both factors are vital not just for successful naval development but for keeping the peace among great powers Finally it highlights how states commonly thought of as unnatural naval powers can nonetheless achieve their political objectives at sea This book will be of much interest to students of naval history maritime strategy and International Relations

Reconceptualizing Deterrence Elli Lieberman, 2013 This book offers a reconceptualisation of conventional deterrence theory and applies it to enduring rivalries in the Middle East The work argues that many of the problems encountered in the development of deterrence theory lay in the fact that it was developed during the Cold War when the immediate problem it had to address was how to prevent catastrophic nuclear wars The logic of nuclear deterrence compelled a preoccupation with the problem of stability over credibility however because the logic of conventional deterrence is different the solution of the tension between credibility and stability is achieved by deference to credibility due to the requirements of reputation and costly signaling This book aims to narrow the gap between theory and evidence It explores how a reconceptualization of the theory as a process that culminates in the internalization of deterrence within enduring rivalries is better suited to account for its final success a finding that has eluded deterrence theorists for long This interdisciplinary book will be of much interest to students of deterrence theory strategic studies international security Middle Eastern studies and IR in general

Wars of Revelation Rebecca Lissner, 2021 Rich in historical detail and theoretical insight Wars of Revelation explains why the United States military interventions have repeatedly transformed its global role and what that means for the future of American grand strategy More than seventy five years since the end of World War II military interventions rather than major wars have emerged as a defining feature of contemporary geopolitics Yet for all the fierce policy debates over interventions and their lessons scholars have largely ignored the systematic linkages between these smaller scale wars and transformations in the grand strategies of states that prosecute them In Wars of Revelation Rebecca Lissner explains why military interventions can be crucibles of grand strategy testing strategic axioms on the battlefield and prompting combatant states to reconceive their global roles Through detailed historical case studies of US involvement in the Korean Vietnam and Persian Gulf Wars Lissner shows how each intervention generated searing insights into the capabilities and intentions of America's international adversaries as well as the potential and limits of its own national power By focusing on these three wars of revelation Lissner presents a fresh perspective on the origins and evolutions of US grand strategy from the dawn of the Cold War to its twilight Persuasively argued and historically illuminating Wars of Revelation is essential reading for anyone who crafts studies or follows international security policy

A Thorn in Transatlantic Relations M. Hampton, 2013-07-31 Americans and Europeans perceive threat differently Americans remain more religious than Europeans and generally still believe their nation is providentially blessed American security culture is relatively stable and includes the deeply held belief that existential threat in the world emanates from the work of evil doers The US must therefore sometimes intervene militarily against evil The European Union EU security culture model differs from traditional European iterations and from the American variant The concept of threat as evil lost salience as Western Europe became more secularist Threats became problems to manage and resolve The upsurge in anti immigrant and anti foreigner sentiment in the midst of economic crisis undermines this model
