Fascinating Facts About Phytonutrients in Spices and Healthy Food Louis S. Premkumar,2014-03-25 For centuries there have been claims that healthy food garnished with exotic spices and condiments provides vital nutrients that help ward off diseases especially preventable diseases such as diabetes and heart disease hypertension coronary artery disease and promote longevity The purpose of writing this book is to update the public about the health benefits of ingredients phytochemicals in spices and healthy food using existing scientific evidence The ultimate proof of health benefits will be deciphered by the isolation and identification of specific phytochemicals acting on specific receptors in the body exerting their biological effects The important point being emphasized is that if the physiological effect of an ingredient is glaring it is considered to elicit a significant response However when the effect of an ingredient is significant yet the effect is not readily perceivable then the usefulness goes unnoticed and can be questioned as a myth For example coffee has several ingredients but only caffeine acting on the adenosine receptors stimulates the central nervous system and promotes wakefulness Similarly the specific active ingredient in hot chili pepper capsaicin activates a member of a recently identified family of receptors called transient receptor potential TRP channels TRP vanilloid 1 TRPV1 which is involved in certain modalities of pain promotes the release of hormones in the gastrointestinal GI tract Although the bioavailability of the active ingredients is low it is important to realize that these ingredients can cause significant local effects in the GI tract by preventing cholesterol regeneration by subduing microbiota inhibiting precancerous growth by

promoting calcium influx and stimulating nerve endings to transmit information and to release of gut hormones that are involved in regulating a variety of functions including appetite and satiety Cooking with Chiles Clifford
