Handbook of Plane Contact Mechanics Valentin L. Popov,Markus Heß,Emanuel Willert,2025-02-18 The book contains a structured collection of complete solutions to all relevant plane contact problems Classic profiles such as the cylinder the wedge or the rectangular flat punch are considered under centric and eccentric loading but also a variety of other technically relevant shapes such as the flat punch with rounded edges the wedge with rounded tip or wavy surfaces With regard to the load configuration adhesive and non adhesive normal contacts tangential contacts and rolling contacts are considered The materials considered are elastic isotropic transversally isotropic viscoelastic and functionally graded media The solutions given are derived in the simplest way available and in addition to the macroscopic relationships between load and contact configuration include the stress fields in the surface and where applicable within the contacting bodies

An Introduction to Contact Topology Hansjörg Geiges,2008-03-13 This text on contact topology is a comprehensive introduction to the subject including recent striking applications in geometric and differential topology Eliashberg's proof of Cerf's theorem via the classification of tight contact structures on the 3 sphere and the Kronheimer Mrowka proof of property P for knots via symplectic fillings of contact 3 manifolds Starting with the basic differential topology of contact manifolds all aspects of 3 dimensional contact manifolds are treated in this book One notable feature is a detailed exposition of Eliashberg's classification of overtwisted contact structures Later chapters also deal with higher dimensional contact topology Here the focus is on contact surgery but other

constructions of contact manifolds are described such as open books or fibre connected sums This book serves both as a self contained introduction to the subject for advanced graduate students and as a reference for researchers

The Configuration Space Method for Kinematic Design of Mechanisms Elisha Sacks, Leo Joskowicz, 2010 A novel algorithmic approach to mechanism design based on a geometric representation of kinematic function called configuration space partitions This book presents the configuration space method for computer aided design of mechanisms with changing part contacts Configuration space is a complete and compact geometric representation of part motions and part interactions that supports the core mechanism design tasks of analysis synthesis and tolerancing It is the first general algorithmic treatment of the kinematics of higher pairs with changing contacts It will help designers detect and correct design flaws and unexpected kinematic behaviors as demonstrated in the book's four case studies taken from industry After presenting the configuration space framework and algorithms for mechanism kinematics the authors describe algorithms for kinematic analysis tolerancing and synthesis based on configuration spaces The case studies follow illustrating the application of the configuration space method to the analysis and design of automotive micro mechanical and optical mechanisms Appendixes offer a catalog of higher pair mechanisms and a description of HIPAIR an open source C mechanical design system that implements some of the configuration space methods described in the book including configuration space visualization and kinematic simulation HIPAIR comes with an interactive graphical user interface and many sample mechanism input files The Configuration Space Method for Kinematic Design of Mechanisms will be a valuable resource for students researchers and engineers in mechanical engineering computer science and robotics

Contact Mechanics K. L. Johnson, 1987-08-28 This treatise is concerned with the stresses and deformation of solid bodies in contact with each other along curved surfaces which touch initially at a point or along a line Examples are a railway wheel and rail or a pair of gear wheel teeth Professor Johnson first reviews the development of the theory of contact stresses since the problem was originally addressed by H Hertz in 1882 Next he discusses the influence of friction and the topographical roughness of surfaces and this is incorporated into the theory of contact mechanics An important feature is the treatment of bodies which deform plastically or viscoelastically In addition to stationary contact an appreciable section of the book is concerned with bodies which are in sliding or rolling contact or which collide

The Space Between Us Ryan D. Enos, 2017 The Space Between Us brings the connection between geography psychology and politics to life By going into the neighborhoods of real cities Enos shows how our perceptions of racial ethnic and religious groups are intuitively shaped by where these groups live and interact daily Through the lens of numerous examples across the globe and drawing on a compelling combination of research techniques including field and laboratory experiments big data analysis and small scale interactions this timely book provides a new understanding of how geography shapes politics and how members of groups think about each other Enos

analysis is punctuated with personal accounts from the field His rigorous research unfolds in accessible writing that will appeal to specialists and non specialists alike illuminating the profound effects of social geography on how we relate to think about and politically interact across groups in the fabric of our daily lives Jacket **2018 CFR e-Book Title 14,**

Scalable Algorithms for Contact Problems Zdeněk Dostál,Tomáš Kozubek,Marie Sadowská,Vít Vondrák,2023-10-28

This book presents a comprehensive treatment of recently developed scalable algorithms for solving multibody contact problems of linear elasticity The brand new feature of these algorithms is their theoretically supported numerical scalability i e asymptotically linear complexity and parallel scalability demonstrated in solving problems discretized by billions of degrees

of freedom The theory covers solving multibody frictionless contact problems contact problems with possibly orthotropic Tresca s friction and transient contact problems In addition it also covers BEM discretization treating jumping coefficients floating bodies mortar non penetration conditions etc This second edition includes updated content including a new chapter on hybrid domain decomposition methods for huge contact problems Furthermore new sections describe the latest algorithm improvements e g the fast reconstruction of displacements the adaptive reorthogonalization of dual constraints and an updated chapter on parallel implementation Several chapters are extended to give an independent exposition of classical bounds on the spectrum of mass and dual stiffness matrices a benchmark for Coulomb orthotropic friction details of discretization etc The exposition is divided into four parts the first of which reviews auxiliary linear algebra optimization and analysis The most important algorithms and optimality results are presented in the third chapter The presentation includes continuous formulation discretization domain decomposition optimality results and numerical experiments The final part contains extensions to contact shape optimization plasticity and HPC implementation Graduate students and researchers in mechanical engineering computational engineering and applied mathematics will find this book of great value and interest
