Advances in Web-Based Learning - ICWL 2004 Wenyin Liu, Yuanchun Shi, Li Qing, 2004-12-06. With the rapid development of Web based learning and new concepts like virtual classrooms, virtual laboratories and virtual universities many issues need to be addressed. On the technical side there is a need for effective technology for deployment of Web based education. On the learning side the cyber mode of learning is very different from classroom based learning. How can instructional development cope with this new style of learning? On the management side the establishment of the cyber university poses very different requirements for the set up. Does industry university partnership provide a solution to addressing the technological and management issues? Why do we need to standardize e learning and what can we do already? As with many other new developments more research is needed to establish the concepts and best practice for Web based learning. ICWL 2004 the 3rd International Conference on Web Based Learning was held at the Tsinghua University Beijing China from August 8th to 11th 2004 as a continued attempt to address many of the above mentioned issues. Following the great successes of ICWL 2002 Hong Kong and ICWL 2003 Australia ICWL 2004 aimed at presenting new progress in the technical pedagogical as well as management issues of Web based learning. The conference featured a comprehensive program including a tutorial session, a keynote talk, a main track for regular paper presentations and an industrial track. We received 120 papers and accepted only 58 of them in the main track for both oral and poster presentations.

Rethinking Virtual Places Erik Champion,2021-11-30 How would the humanities change if we grappled with the ways in which digital and virtual places are designed experienced and critiqued In *Rethinking Virtual Places* Erik Malcolm Champion draws from the fields of computational sciences and other place related disciplines to argue for a more central role for virtual space in the humanities For instance recent developments in neuroscience could improve our understanding of how people experience store and recollect place related encounters Similarly game mechanics using virtual place design might make digital environments more engaging and learning content more powerful and salient In addition Champion provides a brief introduction to new and emerging software and devices and explains how they help hinder or replace our traditional means of designing and exploring places Perfect for humanities scholars fascinated by the potential of virtual space *Rethinking Virtual Places* challenges both traditional and recent evaluation methods to address the complicated problem of understanding how people evaluate and engage with the notion of place **Smart Graphics** Andreas Butz, Antonio Krüger,2004-05-11 This book constitutes the refereed proceedings of the 4th International Symposium on Smart Graphics SG 2004 held in Banff Canada in May 2004 The 10 revised full papers and 8 revised short papers presented were carefully reviewed and selected for presentation The papers address smart graphics issues from the points of view of computer graphics artificial intelligence cognitive science and fine art they are organized in topical sections on virtual characters and environments tangible and hybrid interfaces and graphical interfaces *Playing with the Past* Erik Champion,2010-09-28 How can we increase awareness and understanding of other cultures using interactive digital visualizations of past civilizations In order to answer the above question this book first examines the needs and requirements of virtual travelers and virtual tourists Is there a market for virtual travel Erik Champion examines the overall success of current virtual environments especially the phenomenon of computer gaming Why are computer games and simulations so much more successful than other types of virtual environments Arguments that virtual environments are impeded by technological

constraints or by a paucity of evaluation studies can only be partially correct for computer games and simulations are also virtual environments Many of the underlying issues are caused by a lack of engagement with the philosophical underpinnings of culture presence and inhabitation and there are few exemplars that engage the public with history and heritage using interactive media in a meaningful and relevant manner The intention of *Playing With the Past* is to help designers and critics understand the issues involved in creating virtual environments that promote and disseminate historical learning and cultural heritage through a close study of the interactive design principles at work behind both real and virtual places Topics discussed include the design of virtual environments and especially virtual heritage environments virtual place making cultural presence the pros and cons of game style interaction augmented reality projects and appropriate evaluation methods Virtual heritage environments discussed in the book include projects from Antarctica Australia Mexico Malta Egypt Babylon the Netherlands Cambodia and India
