Corneal Transplantation Namrata Sharma,Ritu Nagpal,Rasik B Vajpayee,2022-11-09 The cornea is the clear outer layer at the front of the eyeball It acts as a window to the eye The cornea helps to focus light rays onto the retina this image is then transmitted to the brain When the cornea is damaged it can become less transparent or its shape can change This can prevent light reaching the retina and causes the picture transmitted to the brain to be distorted or unclear A corneal transplant also known as keratoplasty or a corneal graft is an operation to remove all or part of a damaged cornea and replace it with healthy donor tissue It is used to improve sight relieve pain and treat severe infection or damage One of the most common reasons for a cornea transplant is a condition called keratoconus which causes the cornea to change shape NHS UK This book is a guide to corneal transplantation keratoplasty for ophthalmic surgeons Divided into seven sections the text begins with an overview of evolution preoperative considerations and eye banking The following sections cover a multitude of keratoplasty techniques including endothelial keratoplasty and their potential complications The book concludes with discussion on alternatives to corneal transplantation The third edition of this comprehensive manual has been fully revised with new topics added to provide surgeons with the latest advances in the field A selection of operative videos can be accessed via a QR code provided in the book The previous edition 9788184488593 published in 2010

Immunology of Eye Diseases S. Lightman, 2012-12-06 The eye can become involved in immune mediated diseases that affect it alone or as part of a multi organ disease process Much immunological attention has been focused on other organs affected by these processes and the subject of the immunology of eye diseases is a relatively new one Many of these diseases that involve the eye are not life threatening but can result in devastating loss of sight that if bilateral will have major effects on the patient's life Systemic immunological investigations are generally unhelpful in these patients and one of the major problems in this field has been the lack of diseased tissue available for examination to determine the pathological processes involved Our poor understanding of basic mechanisms of disease in the eye has meant that treatment of many of these conditions is often inadequate It has become possible to apply in the eye many of the techniques used to investigate the role of the immune system in other systems Animal models of many of the disease processes have also allowed dissection of the immune response both within and outside the eye It is my belief that a greater understanding of the mechanisms by which the structures in the eye become damaged will allow more specific and effective therapeutic strategies to be devised

Immune Response and the Eye J. Wayne Streilein, 1999-01-01 In this book the physiologic bases of ocular immune privilege and the distinctive systemic immune responses elicited by eye derived antigens are described Several chapters discuss the pathogenesis of these disorders which arise from infections autoimmunity and neoplasms Finally chapters devoted to corneal and retinal transplantation describe attempts to exploit ocular immune privilege to promote graft survival and thereby cure blindness Ophthalmologists both clinicians and physician scientists general and tumor immunologists transplantation biologists and anyone seeking to understand the immunopathogenic diseases that threaten vision will appreciate the information presented in this book Smolin and Thoft's The Cornea Gilbert Smolin, Charles Stephen Foster, Dimitri T. Azar, Claes H. Dohlman, 2005 Smolin and Thoft's The Cornea is often praised as the best available source of information on corneal and external diseases This new edition with its greatly expanded color atlas section continues to provide guidance on diagnosing and managing problems associated with the cornea It is now fully updated and contains additional information on corneal surgery refractive surgery and stem cell grafting and a new chapter on optical and therapeutic contact lenses
