Friedlander,David P. Harry,1961 A statistical analysis and evaluation of the effect of data adjustment and decision techniques on the efficiency of midcourse guidance maneuvers are presented A potentially self contained optical navigation scheme is hypothesized and all random measurement errors are considered specified by Gaussian distributions The basic guidance equations are developed using linear perturbations methods The nature of data adjustment procedure is that the accuracy of terminal prediction improves successively from one guidance point to the next Guidance logic based on dead band and damping decision expressions further reduces the velocity increment cost and number of corrections required *NASA Technical Report* ,1961 *Special Publications* ,1912

AIDS in Correctional Facilities ,1989 **Surveying** United States. War Department,1940 **Simulation-Driven Design by Knowledge-Based Response Correction Techniques** Slawomir Koziel,Leifur Leifsson,2016-05-13 Focused on efficient simulation driven multi fidelity optimization techniques this monograph on simulation driven optimization covers simulations utilizing physics based low fidelity models often based on coarse discretization simulations or other types of simplified physics representations such as analytical models The methods presented in the book exploit as much as possible any knowledge about the system or device of interest embedded in the low fidelity model with the purpose of reducing the computational overhead of the design process Most of the techniques described in the book are of response correction type and can be split into parametric usually based on analytical formulas and non parametric i e not based on analytical formulas The latter while more complex in implementation tend to be more efficient The book presents a general formulation of response correction techniques as well as a number of specific methods including those based on correcting the low fidelity model response output space mapping manifold mapping adaptive response correction and shape preserving response prediction as well as on suitable modification of design specifications Detailed formulations application examples and the discussion of advantages and disadvantages of these techniques are also included The book demonstrates the use of the discussed techniques for solving real world engineering design problems including applications in microwave engineering antenna design and aero hydrodynamics **Engineering Aid 3 & 2** United States.
