The Mirror and the Mind Katja Guenther, 2022-11-08 How the classic mirror test served as a portal for scientists to explore questions of self awareness Since the late eighteenth century scientists have placed subjects humans infants animals and robots in front of mirrors in order to look for signs of self recognition Mirrors served as the possible means for answering the question What makes us human In *The Mirror and the Mind* Katja Guenther traces the history of the mirror self recognition test exploring how researchers from a range of disciplines psychoanalysis psychiatry developmental and animal psychology cybernetics anthropology and neuroscience came to read the peculiar behaviors elicited by mirrors Investigating the ways mirrors could lead to both identification and misidentification Guenther looks at how such experiments ultimately failed to determine human specificity The mirror test was thrust into the limelight when Charles Darwin challenged the idea that language sets humans apart Thereafter the mirror previously a recurrent if marginal scientific tool became dominant in attempts to demarcate humans from other animals But because researchers could not rely on language to determine what their nonspeaking subjects were experiencing they had to come up with significant innovations including notation strategies testing protocols and the linking of scientific theories across disciplines From the robotic tortoises of Grey Walter and the mark test of Beulah Amsterdam and Gordon Gallup to anorexia research and mirror neurons the mirror test offers a window into the emergence of such fields as biology psychology psychiatry animal studies cognitive science and neuroscience *The Mirror and the Mind* offers an intriguing history of experiments in self awareness and the advancements of the human sciences across more than a century *Foundations of Psychological Testing* Sandra A.
