Franks, 2025-09-30 This book examines the importance of California a socio cultural economic and political powerhouse in the history of modern sport It argues that California has had a profound influence for better or worse on the way that not only America but also the wider world plays sport and spends money to watch others play The book traces the history of sport in California from the mid nineteenth century to the present and looks at how the state s historical development its climate and its unique racial and ethnic demographics have influenced sport at the elite level and in the wider community It considers the importance of spatial politics and cultural citizenship in the development of Californian sport and tells the story of how franchises such as the 49ers and the Lakers as well as individual athletes such as Jackie Robinson and Billie Jean King have had a profound influence on the way their sports have been consumed across America and in the wider world The book also takes a close look at the impact of mega sporting events in the Californian story providing historical context for the LA 2028 Olympic Games and tracing the full arc of the Californization of modern sports This is fascinating reading for anybody with an interest in sport history American history social and cultural history or the relationship between sport and wider society *International Security and the Olympic Games, 1972-2020* Austin

security were set for the future **Architectural Intelligence** Molly Wright Steenson, 2022-11-01 Architects who engaged with cybernetics artificial intelligence and other technologies poured the foundation for digital interactivity In *Architectural Intelligence* Molly Wright Steenson explores the work of four architects in the 1960s and 1970s who incorporated elements of interactivity into their work Christopher Alexander Richard Saul Wurman Cedric Price and Nicholas Negroponte and the MIT Architecture Machine Group all incorporated technologies including cybernetics and artificial intelligence into their work and influenced digital design practices from the late 1980s to the present day Alexander long before his famous 1977 book *A Pattern Language* used computation and structure to visualize design problems Wurman popularized the notion of information architecture Price designed some of the first intelligent buildings and Negroponte experimented with the ways people experience artificial intelligence even at architectural scale Steenson investigates how these architects pushed the boundaries of architecture and how their technological experiments pushed the boundaries of technology What did computational cybernetic and artificial intelligence researchers have to gain by engaging with architects and architectural problems And what was this new space that emerged within these collaborations At times Steenson writes the architects in this book characterized themselves as anti architects and their work as anti architecture The projects Steenson examines mostly did not result in constructed buildings but rather in design processes and tools computer programs interfaces digital environments Alexander Wurman Price and Negroponte laid the foundation for many of our contemporary interactive practices from information architecture to interaction design from machine learning to smart cities Olympic Games Bernard L.
