Peter Gabriel Bergmann started his work on general relativity in 1936 when he moved from Prague to the Institute for Advanced Study in Princeton Bergmann collaborated with Einstein in an attempt to provide a geometrical unified field theory of gravitation and electromagnetism Within this program they wrote two articles together A Einstein and P G Bergmann Ann Math 39 685 1938 and A Einstein V Bargmann and P G Bergmann Th von Karman Anniversary Volume 212 1941 The search for such a theory was intense in the ten years following the birth of general relativity In recent years some of the geometrical ideas proposed in these publications have proved essential in contemporary attempts towards the unification of all interactions including gravity Kaluza Klein type theories and supergravity theories In 1942 Bergmann published the book Introduction to the Theory of Relativity which included a foreword by Albert Einstein This book is a reference for the subject either as a textbook for classroom use or for individual study A second corrected and enlarged edition of the book was

published in 1976 Einstein said in his foreword to the first edition Bergmann's book seems to me to satisfy a definite need. Much effort has gone into making this book logically and pedagogically satisfactory and Bergmann has spent many hours with me which were devoted to this end.

**TAUP 91** A. Morales, J. Morales, J. A. Villar, 2016-06-03 TAUP 91 covers the proceedings of the Second International Workshop on Theoretical and Phenomenological Aspects of Underground Physics held in Toledo Spain on September 9-13 1991. The book focuses on the processes, methodologies, reactions, and transformations involved in underground physics. The selection first offers information on the fundamental issues in particle astrophysics and an overview of the problems related to general cosmology. Topics include connections between particle physics, astrophysics, and cosmology; stellar physics and particles; astrophysical ages; cosmic background radiation and abundances of light elements. The text also takes a look at big bang nucleosynthesis, constraints on new physics, and microwave background radiation. The publication ponders on very wide band interferometric gravitational wave antenna and search for stellar gravitational collapse by macro. The text also examines high energy cosmic neutrinos of acceleration and non acceleration origin, tests of general relativity and Newtonian gravity at large distances, and the dark matter problem and nuclear form factors for the scattering of neutralinos. The selection is a valuable reference for readers interested in underground physics.

*Paths to Dark Energy* Gene Byrd, Arthur D. Chernin, Pekka Teerikorpi, Mauri Valtonen, 2012-07-30 This work provides the current theory and observations behind the cosmological phenomenon of dark energy The approach is comprehensive with rigorous mathematical theory and relevant astronomical observations discussed in context The book treats the background and history starting with the new found importance of Einstein s cosmological constant proposed long ago in dark energy formulation as well as the frontiers of dark energy The authors do not presuppose advanced knowledge of astronomy and basic mathematical concepts used in modern cosmology are presented in a simple but rigorous way All this makes the book useful for both astronomers and physicists and also for university students of physical sciences
