submissions They were organized in topical sections as follows Process mining semantics tools verification timed models model transformation The book also includes two invited talks in full paper length

Distributed Embedded Controller Development with Petri Nets Filipe de Carvalho Moutinho, Luís Filipe Santos Gomes, 2015-10-12 This book describes a model based development approach for globally asynchronous locally synchronous distributed embedded controllers This approach uses Petri nets as modeling formalism to create platform and network independent models supporting the use of design automation tools To support this development approach the Petri nets class in use is extended with time domains and asynchronous channels The authors approach uses models not only providing a better understanding of the distributed controller and improving the communication among the stakeholders but also to be ready to support the entire lifecycle including the simulation the verification using model checking tools the implementation relying on automatic code generators and the deployment of the distributed controller into specific platforms Uses a graphical and intuitive modeling formalism supported by design automation tools Enables verification ensuring that the distributed controller was correctly specified Provides flexibility in the implementation and maintenance phases to achieve desired constraints high performance low power consumption reduced costs enabling porting to different platforms using different communication nodes without changing the underlying behavioral model

Agent-Based Manufacturing S.M. Deen, 2013-04-17 Low volume high variety products like personalized cars or customized engines will be the key issues for manufacturing in the 21st century The necessary control technology is based on the concept of holons which are the units of production and behave as autonomous and cooperative agents providing flexibility adaptability agility and dynamic reconfigurability This book presents the latest research results in agent based manufacturing as carried out by researchers in academia and industry within the international Holonic Manufacturing Systems project As this project was driven by industry the results presented here are of vital interest not just to researchers in agent technologies or distributed artificial intelligence but also to engineers and professionals in industry who have to respond to rapid changes and new demands in production

Fundamentals of Digital Manufacturing Science Zude Zhou, Shane (Shengquan) Xie, Dejun Chen, 2011-10-22 The manufacturing industry will reap significant benefits from encouraging the development of digital manufacturing science and technology Digital Manufacturing Science uses theorems illustrations and tables to introduce the definition theory architecture main content and key technologies of digital manufacturing science Readers will be able to develop an in depth understanding of the emergence and the development the theoretical background and the techniques and methods of digital manufacturing science Furthermore they will also be able to use the basic theories and key technologies described in Digital Manufacturing Science to solve practical engineering problems in modern manufacturing processes Digital Manufacturing Science is aimed at advanced undergraduate and postgraduate students academic researchers and researchers in the manufacturing industry It allows readers to integrate the theories and technologies described with their own research works and to propose new

ideas and new methods to improve the theory and application of digital manufacturing science **Revolutionizing Enterprise Interoperability through Scientific Foundations** Charalabidis, Yannis, Lampathaki, Fenareti, Jardim-Goncalves, Ricardo, 2014-02-28 This book offers information on the latest advancements and research for Enterprise Interoperability knowledge as well as core concepts theories and future directions **Verification, Validation and Testing in Software Engineering** Aristides Dasso, Ana Funes, 2007-01-01 This book explores different applications in V V that spawn many areas of software development including real time applications where V V techniques are required providing in all cases examples of the applications Provided by publisher Vision-Based Interaction Gang Hua, Matthew Turk, 2022-05-31 In its early years the field of computer vision was largely motivated by researchers seeking computational models of biological vision and solutions to practical problems in manufacturing defense and medicine For the past two decades or so there has been an increasing interest in computer vision as an input modality in the context of human computer interaction Such vision based interaction can endow interactive systems with visual capabilities similar to those important to human human interaction in order to perceive non verbal cues and incorporate this information in applications such as interactive gaming visualization art installations intelligent agent interaction and various kinds of command and control tasks Enabling this kind of rich visual and multimodal interaction requires interactive time solutions to problems such as detecting and recognizing faces and facial expressions determining a person s direction of gaze and focus of attention tracking movement of the body and recognizing various kinds of gestures In building technologies for vision based interaction there are choices to be made as to the range of possible sensors employed e g single camera stereo rig depth camera the precision and granularity of the desired outputs the mobility of the solution usability issues etc Practical considerations dictate that there is not a one size fits all solution to the variety of interaction scenarios however there are principles and methodological approaches common to a wide range of problems in the domain While new sensors such as the Microsoft Kinect are having a major influence on the research and practice of vision based interaction in various settings they are just a starting point for continued progress in the area In this book we discuss the landscape of history opportunities and challenges in this area of vision based interaction we review the state of the art and seminal works in detecting and recognizing the human body and its components we explore both static and dynamic approaches to looking at people vision problems and we place the computer vision work in the context of other modalities and multimodal applications Readers should gain a thorough understanding of current and future possibilities of computer vision technologies in the context of human computer interaction *Transformative Impact of Artificial Intelligence on Management Information Systems* Ramzan, Muhammad, Farooq, Muhammad, Adeeb, Hina, 2025-06-12 Artificial intelligence AI has emerged as a significant influence for many fields Particularly in the fields of business AI is driving informative business strategies and enhancing its decision making processes Additionally AI can be leveraged to increase the effectiveness of cybersecurity protocols As a

Advances in Metaheuristics Algorithms: Methods and Applications Erik Cuevas, Daniel Zaldívar, Marco Pérez-Cisneros, 2018-04-10 This book explores new alternative metaheuristic developments that have proved to be effective in their application to several complex problems Though most of the new metaheuristic algorithms considered offer promising results they are nevertheless still in their infancy To grow and attain their full potential new metaheuristic methods must be applied in a great variety of problems and contexts so that they not only perform well in their reported sets of optimization problems but also in new complex formulations The only way to accomplish this is to disseminate these methods in various technical areas as optimization tools In general once a scientist engineer or practitioner recognizes a problem as a particular instance of a more generic class he she can select one of several metaheuristic algorithms that guarantee an expected optimization performance Unfortunately the set of options are concentrated on algorithms whose popularity and high proliferation outstrip those of the new developments This structure is important because the authors recognize this methodology as the best way to help researchers lecturers engineers and practitioners solve their own optimization problems
