Remote Sensing of Aquatic Coastal Ecosystem Processes Laurie L. Richardson, Ellsworth F. LeDrew, 2006-02-02 The aquatic coastal zone is one of the most challenging targets for environmental remote sensing. Properties such as bottom reflectance, spectrally diverse suspended sediments and phytoplankton communities, diverse benthic communities and transient events that affect surface reflectance, coastal blooms, runoff etc. all combine to produce an optical complexity not seen in terrestrial or open ocean systems. Despite this complexity, remote sensing is proving to be an invaluable tool for Case 2 waters. This book presents recent advances in coastal remote sensing with an emphasis on applied science and management. Case studies of the operational use of remote sensing in ecosystem studies, monitoring and interfacing remote sensing science management are presented. Spectral signatures of phytoplankton and suspended sediments are discussed in detail with accompanying discussion of why blue water Case 1 algorithms cannot be applied to Case 2 waters. Audience: This book is targeted for scientists and managers interested in using remote sensing in the study or management of aquatic coastal environments. With only limited discussion of optics and theory presented in the book, such researchers might benefit from the detailed presentations of aquatic spectral signatures and to operational management issues. While not specifically written for remote sensing scientists, it will prove to be a useful reference for this community for the current status of aquatic coastal remote sensing.      Real-Time Recursive Hyperspectral Sample and Band Processing Chein-I Chang, 2017-04-23 This book explores recursive architectures in designing progressive hyperspectral imaging algorithms. In particular, it makes progressive imaging algorithms recursive by introducing the concept of Kalman filtering in algorithm design so that hyperspectral imagery can be processed not only progressively sample by sample or band by band but also recursively via recursive equations. This book can be considered a companion book of author's books *Real Time Progressive Hyperspectral Image Processing* published by Springer in 2016.      **Real-Time Progressive Hyperspectral Image Processing** Chein-I Chang, 2016-03-22 The book covers the most crucial parts of real time hyperspectral image processing: causality and real time capability. Recently, two new concepts of real time hyperspectral image processing: Progressive HyperSpectral Imaging (PHSI) and Recursive HyperSpectral Imaging (RHSI). Both of these can be used to design algorithms and also form an integral part of real time hyperspectral image processing. This book focuses on progressive nature in algorithms on their real time and causal processing implementation in two major applications: endmember finding and anomaly detection, both of which are fundamental tasks in hyperspectral imaging but generally not encountered in multispectral imaging. This book is written to particularly address PHSI in real time processing while a book *Recursive Hyperspectral Sample and Band Processing: Algorithm Architecture and Implementation* Springer 2016 can be considered as its companion book.      **Electrical & Electronics Abstracts** ,1997      **FUSION ...** ,2002      **IGARSS 2004** ,2004      Manual of Remote Sensing, Remote

**Neural Networks and Micromechanics** Ernst Kussul, Tatiana Baidyk, Donald C. Wunsch, 2009-12-01 Micromechanical manufacturing based on microequipment creates new possibilities in goods production If microequipment sizes are comparable to the sizes of the microdevices to be produced it is possible to decrease the cost of production drastically The main components of the production cost material energy space consumption equipment and maintenance decrease with the scaling down of equipment sizes To obtain really inexpensive production labor costs must be reduced to almost zero For this purpose fully automated microfactories will be developed To create fully automated microfactories we propose using artificial neural networks having different structures The simplest perceptron like neural network can be used at the lowest levels of microfactory control systems Adaptive Critic Design based on neural network models of the microfactory objects can be used for manufacturing process optimization while associative projective neural networks and networks like ART could be used for the highest levels of control systems We have examined the performance of different neural networks in traditional image recognition tasks and in problems that appear in micromechanical manufacturing We and our colleagues also have developed an approach to microequipment creation in the form of sequential generations Each subsequent generation must be of a smaller size than the previous ones and must be made by previous generations Prototypes of first generation microequipment have been developed and assessed
