

News From International Carnahan Conference on Security Technology

Henry Oman
Editor-In-Chief

The late Professor John S. Jackson started the "Carnahan Crime Conference" at the University of Kentucky with IEEE-AESS sponsorship. International interest grew, and the name changed to International Carnahan Conference on Security Technology (ICST). The conference location alternates between the United States and other world cities. In 1996, the 30th ICST returned to its first home in Lexington, KY, where an important speaker from Britain was commissioned a colonel in the Kentucky army by the state's governor! Tom Andrews was Chairman of the 1997 conference which was held in Canberra, Australia. The 1998 site will be Alexandria, Virginia.

The outstanding characteristic of this conference is the introduction of new ideas from its international participants. For example, there would have been no practical way for us to bring the following participants to the United States:

- **Jason Brown, Australian Security Intelligence Organization**, has 20 years of experience as a counter-intelligence officer, described the security threats he expects to see in the 21st century, and the security technology and equipment needed to combat them. He described the five participants needed for countering a security threat.
- **Max Robinson, Nottingham Trent University, UK**, described a new PC-based technique that, in real time, converts X-ray line images of baggage passing through an airport scanner into sharp three-dimension views for the operator. Scanned objects, which can be made to rotate on the screen, even have different colors, depending on their density.
- **So-Lin Yen, Ministry of Justice, Taiwan, ROC**, described progress in applying artificial intelligence to identifying people by their voices.
- **John Rogers, Defense Signals Directorate, Canberra, Australia**, described the communication security that could be obtained with the public key, plus

private key, enriched by "Hash" (a huge random number). It would take a year to surreptitiously decrypt such a message with a supercomputer; an ordinary encrypted message can be decrypted within a few hours by a Pentium-based PC.

- A paper from *Barringer Research, Mississauga, Canada*, described an ion mobility spectrometer that can detect nanogram quantities of explosive compounds in dust obtained by vacuuming or wiping the surface of a suitcase.

The hospitality was outstanding. I arrived in the hotel lobby an hour before the conference started — the General Chairman was there to greet me! The final "field trip" was to Australia's Barlong sheep "station." There the farmer demonstrated his sheep-shearing capability after which we were allowed to feed bread to the kangaroos and were treated to a generous lunch.

SECURITY CHALLENGES OF THE 21ST CENTURY

The cold war between two world powers dominated security technology for the last 50 years. New and challenging threats of the 21st century were outlined by Jason Brown, an executive in the Australian Security Office, whose qualifications include 20 years of service as a spy. He described the sources of security threats, their operating plans, and new technology for dealing with them. The threats will be created by these agents:

- A seeker of political power.
- A terrorist who seeks satisfaction and attention by generating costly damage or loss of lives by car-bombing buildings, demolishing airplanes, and attacking crowds.
- A robber who seeks wealth by stealing money or property by means that produce the greatest value with the least risk.
- An agent who is paid for acquiring secret data.

1998 32nd Annual International Carnahan Conference On Security Technology:

1998 32nd Annual International Carnahan Conference on Security Technology IEEE Aerospace and Electronic Systems Society Staff,1998 *Creating Business Value with Information Technology* Namchul Shin,2003-01-01 Addressing questions raised by managers and researchers over the last decade on the business value of information technology IT this book provides business professionals with a more precise rationale for making IT investments by detailing how computerization does not automatically create business value but is one essential component that should be coupled with organizational changes such as new strategies new business processes and new organizational structures *Proceedings* ,2004

Cryptographic Security Architecture Peter Gutmann,2003-10-01 Presents a novel design that allows for a great deal of customization which many current methods fail to include Details a flexible comprehensive design that can be easily extended when necessary Proven results the versatility of the design has been effectively tested in implementations ranging from microcontrollers to supercomputers **1999 International Conference on Image Processing : Proceedings** IEEE Signal Processing Society,1999 These four volumes contain the proceedings of the 1999 International Conference on Image Processing The topic examined include segmentation for application image and texture analysis facial expressions analysis recognition and tracking and image mosaicing *Automated Biometrics* David Zhang,2000-05-31 Biometrics based authentication and identification are emerging as the most reliable method to authenticate and identify individuals Biometrics requires that the person to be identified be physically present at the point of identification and relies on something which you are or you do to provide better security increased efficiency and improved accuracy Automated biometrics deals with physiological or behavioral characteristics such as fingerprints signature palmprint iris hand voice and face that can be used to authenticate a person s identity or establish an identity from a database With rapid progress in electronic and Internet commerce there is also a growing need to authenticate the identity of a person for secure transaction processing Designing an automated biometrics system to handle large population identification accuracy and reliability of authentication are challenging tasks Currently there are over ten different biometrics systems that are either widely used or under development Some automated biometrics such as fingerprint identification and speaker verification have received considerable attention over the past 25 years and some issues like face recognition and iris based authentication have been studied extensively resulting in successful development of biometrics systems in commercial applications However very few books are exclusively devoted to such issues of automated biometrics *Automated Biometrics Technologies and Systems* systematically introduces the technologies and systems and explores how to design the corresponding systems with in depth discussion The issues addressed in this book are highly relevant to many fundamental concerns of both researchers and practitioners of automated biometrics in computer and system security **Healthcare Information Systems and Informatics: Research and Practices** Tan, Joseph,2008-06-30 This book addresses issues involving health information

systems and informatics as innovative forms of investment in healthcare Provided by publisher *Urban Transport XV* C. A. Zhang, 2012-12-06 Biometric Solutions for Authentication in an E World provides a collection of sixteen chapters containing tutorial articles and new material in a unified manner This includes the basic concepts theories and characteristic features of integrating formulating different facets of biometric solutions for authentication with recent developments and significant applications in an E world This book provides the reader with a basic concept of biometrics an in depth discussion exploring biometric technologies in various applications in an E world It also includes a detailed description of typical biometric based security systems and up to date coverage of how these issues are developed Experts from all over the world demonstrate the various ways this integration can be made to efficiently design methodologies algorithms architectures and implementations for biometric based applications in an E world **ITI 2000** Damir Kalpić, Vesna Hljuz Dobrić, 2000 **Index to IEEE Publications** Institute of Electrical and Electronics Engineers, 1998 Issues for 1973 cover the entire IEEE technical literature **Intelligence and Security Informatics** Hsinchun Chen, Richard Miranda, Daniel D. Zeng, Chris Demchak, Therani Madhusudan, 2003-08-03 Since the tragic events of September 11 2001 academics have been called on for possible contributions to research relating to national and possibly international security As one of the original founding mandates of the National Science Foundation mid to long term national security research in the areas of information technologies organizational studies and security related public policy is critically needed In a way similar to how medical and biological research has faced significant information overload and yet also tremendous opportunities for new innovation law enforcement criminal analysis and intelligence communities are facing the same challenge We believe similar to medical informatics and bioinformatics that there is a pressing need to develop the science of intelligence and security informatics the study of the use and development of advanced information technologies systems algorithms and databases for national security related applications through an integrated technological organizational and policy based approach We believe active intelligence and security informatics research will help improve knowledge discovery and dissemination and enhance information sharing and collaboration across law enforcement communities and among academics local state and federal agencies and industry Many existing computer and information science techniques need to be reexamined and adapted for national security applications New insights from this unique domain could result in significant breakthroughs in new data mining visualization knowledge management and

information security techniques and systems **Advanced Biometric Technologies** Girija Chetty,Jucheng Yang,2011-08-09 The methods for human identity authentication based on biometrics the physiological and behavioural characteristics of a person have been evolving continuously and seen significant improvement in performance and robustness over the last few years However most of the systems reported perform well in controlled operating scenarios and their performance deteriorates significantly under real world operating conditions and far from satisfactory in terms of robustness and accuracy vulnerability to fraud and forgery and use of acceptable and appropriate authentication protocols To address some challenges and the requirements of new and emerging applications and for seamless diffusion of biometrics in society there is a need for development of novel paradigms and protocols and improved algorithms and authentication techniques This book volume on Advanced Biometric Technologies is dedicated to the work being pursued by researchers around the world in this area and includes some of the recent findings and their applications to address the challenges and emerging requirements for biometric based identity authentication systems The book consists of 18 Chapters and is divided into four sections namely novel approaches advanced algorithms emerging applications and the multimodal fusion The book was reviewed by editors Dr Girija Chetty and Dr Jucheng Yang We deeply appreciate the efforts of our guest editors Dr Norman Poh Dr Loris Nanni Dr Jianjiang Feng Dr Dongsun Park and Dr Sook Yoon as well as a number of anonymous reviewers
