Vertebrate Blood Cells Arthur Frederic Rowley, N. A. Ratcliffe, 1988-02-25 First published in 1988 *Vertebrate Blood Cells* provided a comprehensive review of our knowledge of the structure and function of vertebrate blood cells This was the first book to attempt to draw together such a guide and this volume was essential reading for this subject The book consists of six chapters on general evolutionary aspects fish amphibian reptilian avian and mammalian haematology written by experts in his/her field Of particular importance is the standardized format used from chapter to chapter which allows the reader to compare the information available on a particular aspect from one group of animals to another The book should be of interest to immunologists haematologists and general biologists as well as undergraduate students of zoology cell biology microbiology and veterinary and human medicine *Advances in Clinical Chemistry*, 1998-10-20 For more than thirty years this serial has broadened the technical scope and expanded the scientific base of clinical chemistry These volumes clarify the areas of molecular biology informatics and the monitoring of physiological parameters in critical situations as they pertain to clinical chemistry Each volume of *Advances in Clinical Chemistry* contains an index and each chapter includes references

Vertebrate Red Blood Cells Mikko Nikinmaa, 2012-12-06 This book reviews the respiratory function of vertebrate red cells I have defined the phrase respiratory function broadly to include in addition to the actual oxygen and carbon dioxide transport erythropoiesis haemoglobin synthesis red cell structure the deformability of red cells in circulation ion and substrate transport across the cell membrane cellular metabolism and control of cellular volume and pH All of these aspects of the red cell function may affect gas transport between the respiratory epithelia and the tissues Throughout the book I have tried to relate our current knowledge about the nucleated red cell function to the wealth of information about the function of mammalian red cells However whenever possible I have placed the emphasis on the nucleated red cell function for two reasons First the erythrocytes of 90% of vertebrate species are nucleated and second nucleated red cell function has not been reviewed earlier in a single volume This being the case I have tried to make the reference list as complete as I could with regard to nucleated red cells I hope that the approach adopted is useful for both comparative and human physiologists Many people have contributed to the making of this book directly or indirectly Antti Soivio started me in this field Prof Henrik Wallgren has always encouraged fresh scientific ideas in his department My present ideas of red cell function have been influenced by work carried out with Prof Roy E *CRC Handbook Series in Clinical Laboratory Science* Clinical rubber company, Chemical Rubber Company Cleveland, Ohio, 1978 *CRC Handbook Series in Clinical Laboratory Science* Robert M.
