Educational Innovation in Economics and Business V L. Borghans, 2000

The Information and Communication Technology revolution results in profound changes to the heart of business and economics Changes in the workplace new communication technology new organizational structures and new production technologies force business educators to renew their focus on the curricula of business schools There is no doubt these changes influence business education and instructional technology But change will go far beyond the mere introduction of technology in the classroom Alliances between the corporate world and business education are no longer fictitious but are necessary to establish stronger bonds between educational systems and the workplace The fifth volume in the series *Educational Innovation in Economics and Business* contains a unique selection of articles addressing various issues on how business education should adapt to changing needs of the corporate world It is meant for educators in corporate training centers and for teachers in further and higher education

Educational Innovation in Economics and Business V Lex Borghans, Wim H. Gijssels, Richard G.

Milner, John E. Stinson, 2005-12-17 The workplace is changing drastically these days As a consequence of the Information and Communication Technology ICT revolution new economic activities emerge the production process changes people use different communication tools and organizational structures are adjusted All these changes relate to the heart of business and economics and there is no doubt that they will also influence education in these areas Of course ICT provides new technologies to facilitate learning but a changing workplace also requires a renewed focus within the curriculum of economics and business education If ICT is leading to profound change in the workplace is innovation then only a matter of

introducing more technology in education Unfortunately this is not necessarily true The translation of changes in the workplace into an improved curriculum requires serious analysis of the essence of the changes at the work place and the way technology may enable student learning For example relevant knowledge is changing faster and faster Does this mean that we have to adopt the curriculum faster and faster Perhaps not as students will have a labor market career of 30 or 40 years Focusing on today s knowledge even if it is very up to date loses more and more value if the life cycle of knowledge becomes shorter Increased speed of change also implies a decrease in the value of knowing all these things

Organizing for Digital Innovation Alessandra Lazazzara,Raoul C.D. Nacamulli,Cecilia Rossignoli,Stefano Za,2018-06-29 This book presents a collection of research papers exploring the human side of digital innovation management with a specific focus on what people say and share on social media how they respond to the introduction of specific IT tools and how digital innovations are impacting sustainability and inclusion Given the plurality of views that it offers the book is particularly relevant for digital technology users companies scientists and governments The overall spread of digital and technological advances is enhanced or hampered by people s skills behaviors and attitudes The challenge of balancing the digital dimension with humans situated in specific contexts relations and networks has sparked a growing interest in how people use and respond to digital innovations The content of the book is based on a selection of the best papers original double blind peer reviewed contributions presented at the annual conference of the Italian chapter of the AIS which was held in Milan Italy in October 2017

Resources in Education ,2001-04 Faith-Based Education That Constructs HeeKap Lee,2010-08-09

Constructivism is everywhere It is a hot issue at this time in the field of philosophy education technology and religion However can constructivism be an alternative approach in faith based education While some conclude that Jesus knew learning was an active knowledge creating process and that he always encouraged his disciples to think deeply and go beyond the surface level others would find that constructivism undercuts faith based education because of its claims to relativity For example constructivists claim that meaning is imposed on the world by us rather than existing in the world independently from us Thus they proclaim that truth is relative to particular times places and people Christians hold that truth does exist absolutely So how can there be a way forward for faith based educators who see the good in the constructivist approach In Faith Based Education that Constructs readers will find a unique approach whereby constructivism may appropriately be applied to a faith based education setting Although disagreement can occur between constructivism and faith based education this book concludes that constructivist thought and Christian faith based education are in the end congruent and harmonious in significant ways Those faith based educators who continue to hold cautionary views of radical constructivist assertions against absolute truths need not disregard all other aspects of constructivism
