Constructing the Beginning Simon Locke, 2014-04-04 In *Constructing the Beginning* Simon Locke offers a new approach to considering the enigma of creation science using the perspective of discourse analysis Using the publications of the British Creation Science Movement to perform a detailed analysis of the creationist case Locke demonstrates that the discourses and rhetorics used by natural and social scientists are also employed by non scientists Out of this study a view of science as a cultural resource develops questioning the adequacy of perceived sociological wisdom that sees science as the source and embodiment of cultural rationalization As a case study of the use of science as a discursive resource in everyday life *Constructing the Beginning* speaks to scholars of discourse analysis constructionism rhetorics and the public understanding of science It will also be of great interest to scholars in the areas of cultural studies sociology of scientific knowledge and of religion postmodernism and sociological theory Additional Copy Creation science is the target of much attack these days from both within and outside of the orthodox scientific community This book however takes a different approach It is not an attack on creationism nor is it a defense The author's interest is not in creationism at all but rather it is in the questions of the role and significance of science in modernity or the public understanding of science Locke's approach to this issue is a discursive and rhetorical one Creationism is treated as a case study of the argumentative engagement between science and non science which in his view is as central to the commonsense lifeworld of modernity as much as it is to the lives of its intellectuals An important dimension of the public meaning of science in modernity is its limits and its relations with other modes of thought and belief which continue to survive as discourses in the wider culture Creationism is merely one example

of this general feature The book begins with a discussion of the current issues in the public understanding of science in relation to traditional sociological views of the impact of science on modernity This is examined through rationalization and the contrasting view derived from the sociology of scientific knowledge which points to the likelihood of a much more complex and variable relationship than rationalization proposes It continues with an argument and detailed analysis that focuses on three main points the problem of a competing account of reality the world in the form of evolution the problem of competing accounts of the Bible the Word in the form of different versions of Christianity and the realization that both of these problems must be managed together in such a way that creationists own version s of the world and of the Word are compatible a compatibility achieved through a discursive syncretism The final chapter brings together the strands of the argument to further develop the implications of the dilemma of science for the public understanding of science through the idea of science as a cultural resource and its possible relation to other such cultural resources within modernity such as Christianity It is suggested that much so called anti science could be made sense of in these terms and proposes further research in this direction

Disseminating Darwinism Ronald L. Numbers, John Stenhouse, 1999-12-28 This innovative collection of original essays focuses on the ways in which geography gender race and religion influenced the reception of Darwinism in the English speaking world of the late nineteenth and early twentieth centuries The contributions to this volume collectively illustrate the importance of local social physical and religious arrangements while revealing that neither distance from Darwin s home at Down nor size of community greatly influenced how various regions responded to Darwinism Essays spanning the world from Great Britain and North America to Australia and New Zealand explore the various meanings for Darwinism in these widely separated locales while other chapters focus on the difference it made in the debates over evolution

Beckwith, 2002-12-24 In 1987 in *Edwards v Aguillard* the United States Supreme Court declared as unconstitutional a Louisiana statute requiring the state's public schools to teach creationism if evolution is taught and to teach evolution if creationism is taught It was a serious blow to creationism in public schools but a new movement since then has kept the debate alive That new movement is Intelligent Design Should Intelligent Design be taught in schools In *Law Darwinism Public Education* Francis J Beckwith asks whether teaching ID in public schools would be constitutional in light of the Supreme Court's decision in *Edwards v Aguillard* At that time the Court ruled that teaching creationism violates the Establishment Clause of the First Amendment of the U S Constitution Beckwith examines the Intelligent Design theory and the *Edwards* case to find out whether teaching ID would suffer the same fate if brought before the court **The Popular**
