**Humanism in STEM Education** Bryan Dewsbury, Susannah McGowan, Sheila S. Jaswal, Desiree Forsythe, 2024-09-24

Research demonstrates that STEM disciplines perpetuate a history of exclusion particularly for students with marginalized identities This poses problems particularly when science permeates every aspect of contemporary American life Institutions repeated failures to disrupt systemic oppression in STEM has led to a mostly white cisgender and male scientific workforce replete with implicit and or explicit biases Education holds one pathway to disrupt systemic linkages of STEM oppression from society to the classroom Maintaining views on science as inherently objective isolates it from the world in which it is performed STEM education must move beyond the transactional approaches to transformative environments manifesting respect for students social and educational capital We must create a STEM environment in which students with marginalized identities feel respected listened to and valued We must assist students in understanding how their positionality privilege and power both historically and currently impacts their meaning making and understanding of STEM Integrating Social and Emotional Learning with Content Katherine Kapustka, Sarah Bright, 2022-03-14 Integrating Social and Emotional Learning with Content builds a framework for creatively and effectively using picture books to integrate social and emotional learning SEL with teaching across content areas Thoughtful book choices in mixed ability early elementary classrooms have the power to not only support gifted students as they develop academically but also to provide an opportunity to address their unique social and emotional needs such as asynchronous development and an early awareness of complex and challenging issues in their lives and the world at large Picture books are an invaluable tool for this work because the characters topics and settings increasingly represent and celebrate the lived experiences of diverse student populations supporting culturally responsive teaching Packed with lesson plans book lists and more this book is perfect for teachers in gifted and mixed ability classrooms as well as homeschooling parents looking to help their children make meaningful connections between their culture languages and lived experiences and the academic content and SEL skills they are being taught in the classroom Helping Children Learn Mathematics, 5th Australian Edition Robert Reys, Mary Lindquist, Diana V. *Contemporary Perspectives on Early Childhood Curriculum* Olivia Saracho, Bernard Spodek, 2002-06-01 Over the years educational scholars have proposed different conceptions of the curriculum It is as if each scholar researcher university educator and practitioner has developed her or his own personal definition Unfortunately there is no one single definition that everybody has agreed upon Table 1 presents a sample of these definitions A universal definition for curriculum may continue to be elusive and may even change through the years to address changes in the social forces and changes in related school goals Nonetheless the approach in curriculum development is consistent Curriculum developers establish goals develop experiences designate content and evaluate experiences and outcomes Most curriculum developers consistently use such terms as curriculum planning curriculum development curriculum implementation and curriculum evaluation and many others to describe curriculum related activities Unfortunately without a consistent definition of curriculum it is difficult for the curriculum developers to identify what it is that needs to be planned developed implemented or evaluated If curriculum developers rely on the curriculum experts definitions they will find that their definitions identify a product a program

determine goals and objectives and learner experiences However its heterogeneity may be inspiring if curriculum developers rely on the components of each definition that depict the richness of the field which in turn can provide a foundation for contemporary content concepts and creativity A curriculum is an anthology of learning experiences conceived and arranged based on a program s educational goals and the community s social forces Each curriculum manifests an image of what children ought to be and become Biber 1984 p 303 grounded on the awareness of social values and a system that interprets those values into experiences for learners The concept of curriculum as a distinctive domain of study within education arose from the demand to arrange organize and translate such awareness into educational programs of study It integrates the historical study of the goals and content of schooling analyses of curriculum documents and analyses of the children s experiences in school The first formal curriculum text was published in 1918 Bobbit 1918 although in the United States contemporary curriculum study goes back to the early 1890 s when lead committees challenged the form and structure of public schooling Presently curriculum development is fundamental at all educational levels
