Arithmetical Properties Of Commutative Rings And Monoids:

Arithmetical Properties of Commutative Rings and Monoids Scott T. Chapman, 2005-03-01 The study of nonunique factorizations of elements into irreducible elements in commutative rings and monoids has emerged as an independent area of research only over the last 30 years and has enjoyed a recent flurry of activity and advancement This book presents the proceedings of two recent meetings that gathered key researchers from around the world

Multiplicative Ideal Theory and Factorization Theory Scott Chapman, Marco Fontana, Alfred Geroldinger, Bruce Olberding, 2016-07-29 This book consists of both expository and research articles solicited from speakers at the conference entitled Arithmetic and Ideal Theory of Rings and Semigroups held September 22-26 2014 at the University of Graz Graz Austria It reflects recent trends in multiplicative ideal theory and factorization theory and brings together for the first time in one volume both commutative and non commutative perspectives on these areas which have their roots in number theory commutative algebra and algebraic geometry Topics discussed include topological aspects in ring theory Prüfer domains of integer valued polynomials and their monadic submonoids and semigroup algebras It will be of interest to practitioners of mathematics and computer science and researchers in multiplicative ideal theory factorization theory number theory and algebraic geometry

Non-Unique Factorizations Alfred Geroldinger, Franz Halter-Koch, 2006-01-13 From its origins in algebraic number theory the theory of non unique factorizations has emerged as an independent branch of algebra and number theory Focused efforts over the past few decades have wrought a great number and variety of results However these remain dispersed throughout the vast literature For the first time

Advances in Rings, Modules and Factorizations Alberto Facchini, Marco Fontana, Alfred Geroldinger, Bruce Olberding, 2020-06-02 Occasioned by the international conference Rings and Factorizations held in February 2018 at University of Graz Austria this volume represents a wide range of research trends in the theory of commutative and non commutative rings and their modules including multiplicative ideal theory Dedekind and Krull rings and their generalizations rings of integer valued polynomials topological aspects of ring theory factorization theory in rings and semigroups and direct sum decompositions of modules The volume will be of interest to researchers seeking to extend or utilize work in these areas as well as graduate students wishing to find entryways into active areas of current research in algebra A novel aspect of the volume is an emphasis on how diverse types of algebraic structures and contexts rings modules semigroups categories may be treated with overlapping and reinforcing approaches

Factoring Ideals in Integral Domains Marco Fontana, Evan Houston, Thomas Lucas, Unione matematica italiana, 2013 This volume provides a wide ranging survey of and many new results on various important types of ideal factorization actively investigated by several authors in recent years Examples of domains studied include 1 those with weak factorization in which each nonzero nondivisorial ideal can be factored as the product of its divisorial closure and a product of maximal ideals and 2 those with pseudo Dedekind factorization in which each nonzero noninvertible ideal can be factored as the

product of an invertible ideal with a product of pairwise comaximal prime ideals. Prüfer domains play a central role in our study but many non Prüfer examples are considered as well.

Commutative Algebra and its Applications Marco Fontana, Salah-Eddine Kabbaj, Bruce Olberding, Irena Swanson, 2009-09-04 This volume contains selected refereed papers based on lectures presented at the Fifth International Fez Conference on Commutative Algebra and Applications that was held in Fez Morocco in June 2008. The volume represents new trends and areas of classical research within the field with contributions from many different countries. In addition the volume has as a special focus the research and influence of Alain Bouvier on commutative algebra over the past thirty years.

Abelian Groups, Rings, Modules, and Homological Algebra Pat Goeters, 2016-04-19 About the book In honor of Edgar Enochs and his venerable contributions to a broad range of topics in Algebra top researchers from around the world gathered at Auburn University to report on their latest work and exchange ideas on some of today's foremost research topics. This carefully edited volume presents the refereed papers of the par

Multiplicative Ideal Theory in Commutative Algebra James W. Brewer, Sarah Glaz, William Heinzer, Bruce Olberding, 2006-12-15 For over forty years Robert Gilmer's numerous articles and books have had a tremendous impact on research in commutative algebra. It is not an exaggeration to say that most articles published today in non-Noetherian ring theory and some in Noetherian ring theory as well originated in a topic that Gilmer either initiated or enriched by his work. This volume a tribute to his work consists of twenty four articles authored by Robert Gilmer's most prominent students and followers. These articles combine surveys of past work by Gilmer and others recent results which have never before seen print open problems and extensive bibliographies. In a concluding article Robert Gilmer points out directions for future research highlighting the open problems in the areas he considers of importance. Robert Gilmer's article is followed by the complete list of his published works his mathematical genealogical tree information on the writing of his four books and reminiscences about Robert Gilmer's contributions to the stimulating research environment in commutative algebra at Florida State in the middle 1960s. The entire collection provides an in depth overview of the topics of research in a significant and large area of commutative algebra.

[Recent Progress in Ring and Factorization Theory](#) Matej Brešar, Alfred Geroldinger, Bruce Olberding, Daniel Smertnig, 2025-06-11 This proceedings volume gathers a selection of cutting edge research in both commutative and non commutative ring theory and factorization theory. The papers were presented at the Conference on Rings and Factorization held at the University of Graz Austria July 10-14 2023. The volume covers a wide range of topics including multiplicative ideal theory Dedekind Prüfer Krull and Mori rings non commutative rings and algebras rings of integer valued polynomials topological aspects in ring theory factorization theory in rings and semigroups and direct sum decomposition of modules. The conference also featured two special sessions dedicated to Matej Brešar and Sophie Frisch on the occasion of their 60th birthdays. This volume is aimed at graduate students and researchers in these areas as well as related fields and provides new insights into both classical and contemporary research in ring and

factorization theory **Combinatorial Number Theory and Additive Group Theory** Alfred Geroldinger, Imre Ruzsa, 2009-04-15 Additive combinatorics is a relatively recent term coined to comprehend the developments of the more classical additive number theory mainly focussed on problems related to the addition of integers Some classical problems like the Waring problem on the sum of k th powers or the Goldbach conjecture are genuine examples of the original questions addressed in the area One of the features of contemporary additive combinatorics is the interplay of a great variety of mathematical techniques including combinatorics harmonic analysis convex geometry graph theory probability theory algebraic geometry or ergodic theory This book gathers the contributions of many of the leading researchers in the area and is divided into three parts The two first parts correspond to the material of the main courses delivered Additive combinatorics and non unique factorizations by Alfred Geroldinger and Sumsets and structure by Imre Z Ruzsa The third part collects the notes of most of the seminars which accompanied the main courses and which cover a reasonably large part of the methods techniques and problems of contemporary additive combinatorics **Focus on Commutative Rings Research** Ayman Badawi, 2006 Focus on Commutative Rings Research *Groups, Rings and Group Rings* A. Giambruno, César Polcino Milies, Sudarshan K. Sehgal, 2009 This volume represents the proceedings of the conference on Groups Rings and Group Rings held July 28 August 2 2008 in Ubatuba Brazil Papers in this volume contain results in active research areas in the theory of groups group rings and algebras including noncommutative rings polynomial identities Lie algebras and superalgebras In particular topics such as growth functions on varieties groups of units in group rings representation theory of Lie algebras Jordan alternative and Leibniz algebras graded identities automorphisms of trees and partial actions are discussed **Commutative Algebra** Alberto Corso, Philippe Gimenez, Maria Vaz Pinto, Santiago Zarzuela, 2005-08-15 Packed with contributions from international experts Commutative Algebra Geometric Homological Combinatorial and Computational Aspects features new research results that borrow methods from neighboring fields such as combinatorics homological algebra polyhedral geometry symbolic computation and topology This book consists of articles pres

Mathematical and Physical Theory of Turbulence, Volume 250 John Cannon, Bhimsen Shivamoggi, 2006-06-15 Although the current dynamical system approach offers several important insights into the turbulence problem issues still remain that present challenges to conventional methodologies and concepts These challenges call for the advancement and application of new physical concepts mathematical modeling and analysis techniques Bringing together ex **Groups, Rings and Group Rings** Antonio Giambruno, Cesar Polcino Milies, Sudarshan K. Sehgal, 2006-01-20 This book is a collection of research papers and surveys on algebra that were presented at the Conference on Groups Rings and Group Rings held in Ubatuba Brazil This text familiarizes researchers with the latest topics techniques and methodologies in several branches of contemporary algebra With extensive coverage it examines broad themes f *Structural Additive Theory* David J. Grynkiewicz, 2013-05-30 Nestled between number theory combinatorics algebra and analysis lies a rapidly developing subject

in mathematics variously known as additive combinatorics additive number theory additive group theory and combinatorial number theory Its main objects of study are not abelian groups themselves but rather the additive structure of subsets and subsequences of an abelian group i e sumsets and subsequence sums This text is a hybrid of a research monograph and an introductory graduate textbook With few exceptions all results presented are self contained written in great detail and only reliant upon material covered in an advanced undergraduate curriculum supplemented with some additional Algebra rendering this book usable as an entry level text However it will perhaps be of even more interest to researchers already in the field The majority of material is not found in book form and includes many new results as well Even classical results when included are given in greater generality or using new proof variations The text has a particular focus on results of a more exact and precise nature results with strong hypotheses and yet stronger conclusions and on fundamental aspects of the theory Also included are intricate results often neglected in other texts owing to their complexity Highlights include an extensive treatment of Freiman Homomorphisms and the Universal Ambient Group of sumsets A B an entire chapter devoted to Hamidoune s Isoperimetric Method a novel generalization allowing infinite summands in finite sumset questions weighted zero sum problems treated in the general context of viewing homomorphisms as weights and simplified proofs of the Kemperman Structure Theorem and the Partition Theorem for setpartitions
