 Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Agriculture and Natural
 Resources, Board on Atmospheric Sciences and Climate, Committee on the Evaluation of the Landscape Conservation
 Cooperatives, 2016-11-28 The United States tradition of conserving fish wildlife habitats and cultural resources dates to the
 mid 19th century States have long sought to manage fish and wildlife species within their borders whereas many early
 federal conservation efforts focused on setting aside specific places as parks sanctuaries or reserves With advances in
 landscape ecology over the past quarter century conservation planners scientists and practitioners began to stress the
 importance of conservation efforts at the scale of landscapes and seascapes These larger areas were thought to harbor
 relatively large numbers of species that are likely to maintain population viability and sustain ecological processes and
 natural disturbance regimes often considered critical factors in conserving biodiversity By focusing conservation efforts at
 the level of whole ecosystems and landscape practitioners can better attempt to conserve the vast majority of species in a
 particular ecosystem Successfully addressing the large scale interlinked problems associated with landscape degradation will
 necessitate a planning process that bridges different scientific disciplines and across sectors as well as an understanding of
 complexity uncertainty and the local context of conservation work The landscape approach aims to develop shared
 conservation priorities across jurisdictions and across many resources to create a single collaborative conservation effort that
 can meet stakeholder needs Conservation of habitats species ecosystem services and cultural resources in the face of
 multiple stressors requires governance structures that can bridge the geographic and jurisdictional boundaries of the
 complex socio ecological systems in which landscape level conservation occurs The Landscape Conservation Cooperatives
 LCC Network was established to complement and add value to the many ongoing state tribal federal and nongovernmental
 efforts to address the challenge of conserving species habitats ecosystem services and cultural resources in the face of large
 scale and long term threats including climate change A Review of the Landscape Conservation Cooperatives evaluates the
 purpose goals and scientific merits of the LCC program within the context of similar programs and whether the program has
 resulted in measurable improvements in the health of fish wildlife and their habitats **Arizona Highways 2004**
