Khesin, Serge L. Tabachnikov, 2014-09-10 Vladimir Arnold an eminent mathematician of our time is known both for his mathematical results which are many and prominent and for his strong opinions often expressed in an uncompromising and provoking manner His dictum that Mathematics is a part of physics where experiments are cheap is well known This book consists of two parts selected articles by and an interview with Vladimir Arnold and a collection of articles about him written by his friends colleagues and students The book is generously illustrated by a large collection of photographs some never before published The book presents many a facet of this extraordinary mathematician and man from his mathematical discoveries to his daredevil outdoor adventures **Benedict Arnold's Army** Arthur S. "Hap" Arnold's World War II Diaries, Volume 1**, Goedel's Way Gregory Chaitin, Francisco A Doria, Newton C.A. da Costa, 2011-10-14 Kurt G del 1906 1978 was an Austrian American mathematician who is best known for his incompleteness theorems He was the greatest mathematical logician of the 20th century with his contributions extending to Einstein's general relativity as he proved that Einstein's theory allows for time machines The G del incompleteness theorem the usual formal mathematical systems cannot prove nor disprove all true mathematical sentences is frequently presented in textbooks as something that happens in the rarefied realms of mathematical logic and that has nothing to do with the real world Practice shows the contrary though one can demonstrate the validity of the phenomenon in various areas ranging from chaos theory and physics to economics and even ecology In this lively treatise based on Chaitin's groundbreaking work and on the da Costa Doria results in physics ecology economics and computer science the authors show that the G del incompleteness phenomenon can directly bear on the

practice of science and perhaps on our everyday life This accessible book gives a new detailed and elementary explanation of the Godel incompleteness theorems and presents the Chaitin results and their relation to the da Costa Doria results which are given in full but with no technicalities Besides theory the historical report and personal stories about the main character and on this book's writing process make it appealing leisure reading for those interested in mathematics logic physics philosophy and computer sciences See also <http://www.youtube.com/watch?v=REy9noY5Sg8> *With the Possum and the Eagle* Ralph H. Alekseev, 2004-05-31 Do formulas exist for the solution to algebraical equations in one variable of any degree like the formulas for quadratic equations The main aim of this book is to give new geometrical proof of Abel's theorem as proposed by Professor V I Arnold The theorem states that for general algebraical equations of a degree higher than 4 there are no formulas representing roots of these equations in terms of coefficients with only arithmetic operations and radicals A secondary and more important aim of this book is to acquaint the reader with two very important branches of modern mathematics group theory and theory of functions of a complex variable This book also has the added bonus of an extensive appendix devoted to the differential Galois theory written by Professor A G Khovanskii As this text has been written assuming no specialist prior knowledge and is composed of definitions examples problems and solutions it is suitable for self study or teaching students of mathematics from high school to graduate **Groups of Prime Power Order.
