

Summary: Aromaticity

Aromaticity is the term given to describe the unusual **stability** of benzene and related molecules. Not related to smells! 😊

- Benzene does not easily undergo **addition** like normal alkenes
- When benzene does undergo reaction, it tends to undergo **substitution** reactions
(and even then, often requires heating and addition of a catalyst)

- The measured **resonance energy** of benzene is extremely high (36 kcal/mol) compared to conjugated alkenes like 1,3-cyclohexadiene (2 kcal/mol)
- Unlike dienes, which have alternating bond lengths, **all C-C bond lengths in benzene are identical** (1.40 Å)

Equivalent resonance structures
(not an equilibrium!)

Either structure for benzene is correct and they can be used interchangeably

Hybrid of these two forms sometimes drawn like this to show that the pi-electrons are "**delocalized**"

- The property of aromaticity is not unique to benzene

Aromatic Chemistry:

Aromatic Chemistry John D. Hepworth, David R. Waring, Michael J. Waring, 2002 This book provides an up to date and comprehensive account of aromatic chemistry A series of chapters describes the synthesis and reactions of the major functional derivatives of benzene and the more common polycyclic systems The concept of aromaticity and the mechanism of aromatic substitution are discussed as is the use of metals in the synthesis of aromatic compounds Throughout emphasis is placed on mechanisms Worked problems and questions are provided to aid understanding In addition to providing material required by an undergraduate studying chemistry Aromatic Chemistry is also ideal for industrial chemists seeking to update their knowledge of this important aspect of chemistry Ideal for the needs of undergraduate chemistry students Tutorial Chemistry Texts is a major new series consisting of short single topic or modular texts concentrating on the fundamental areas of chemistry taught in undergraduate science courses Each book provides a concise account of the basic principles underlying a given subject embodying an independent learning philosophy and including worked examples

Industrial Aromatic Chemistry Heinz-Gerhard Franck, Jürgen W. Stadelhofer, 2012-12-06 Aromatic organic hydrocarbons and heterocycles represent a bulk of about one third of all industrially produced organic basic materials Aromatic compounds such as benzene phenol naphthalene anthracene and their homologues are derived from raw materials coal crude oil and biogenic resources by thermal and catalytic refining processes This book introduces the chemistry of aromatics with a brief discussion of the aromatic character and a survey of historical aspects particularly the development of the organic dye industry during the 19th century The main emphasis of the book is to give a clear prospect of industrial processes for the production and the derivatisation of aromatics with consistent flow diagrams Economical aspects of by and side products are especially regarded For the most important aromatics an analysis of the international market included their derivatives polymers pesticides dyes pigments and drugs Professional scientists managers and students in chemistry and chemical engineering will find a wealth of information for their career and daily work

Aromatic and Heteroatomic Chemistry Volume 7 Hans SUSCHITZKY, 1979 Annotation Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have

remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued

Aromatic Chemistry Malcolm Sainsbury, 1992-08-27 All the basic principles of this important topic are clearly presented here in an account which takes as examples many compounds of industrial and biological significance Consideration is given to the structure reactions and properties of benzene and classes of aromatic compounds derived from it and topics such as thermodynamic versus kinetic control and pericyclic reactions are introduced The text also covers polycyclic arenes and the small and large ring systems which are embraced by the wider definition of aromaticity

A Philatelic Ramble Through Chemistry Edgar Heilbronner, Foil A. Miller, 2004-03 This is not a history of chemistry which uses stamps instead of the usual illustrations but a collection of short essays and comments on such chemistry as can be found on postage stamps and other philatelic items In other words the choice of topics is dictated by the philatelic material available with the necessary consequence that important parts of chemical history will be missing for the simple reason that they have not found their way onto postage stamps Thus the reader may find detailed comments on lesser known chemists such as Wilhelm August Lampadius who has been honoured with two stamps by the German Post Office but hardly anything on such luminaries as Robert Bunsen who have not been deemed worthy of a commemorative issue

Aromatic and Heteroaromatic Chemistry , 1989-03-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued
