**Cours d'automatique théorique** Robert Pallu de La Barrière,1966      *National Library of Medicine Current Catalog*  
National Library of Medicine (U.S.),1967 First multi year cumulation covers six years 1965 70      Mathematical Methods of  
Game and Economic Theory Jean-Pierre Aubin,2007-01-01 Mathematical economics and game theory approached with the  
fundamental mathematical toolbox of nonlinear functional analysis are the central themes of this text Both optimization and  
equilibrium theories are covered in full detail The book s central application is the fundamental economic problem of  
allocating scarce resources among competing agents which leads to considerations of the interrelated applications in game  
theory and the theory of optimization Mathematicians mathematical economists and operations research specialists will find  
that it provides a solid foundation in nonlinear functional analysis This text begins by developing linear and convex analysis  
in the context of optimization theory The treatment includes results on the existence and stability of solutions to optimization  
problems as well as an introduction to duality theory The second part explores a number of topics in game theory and  
mathematical economics including two person games which provide the framework to study theorems of nonlinear analysis  
The text concludes with an introduction to non linear analysis and optimal control theory including an array of fixed point  
and subjectivity theorems that offer powerful tools in proving existence theorems      Cours d'automatique Brigitte d'

Roland Longchamp,2010-01-01      **Variational Calculus, Optimal Control and Applications** Leonhard Bittner,Roland  
Bulirsch,Knut Heier,Werner Schmidt,2012-12-06 The 12th conference on Variational Calculus Optimal Control and  
Applications took place September 23 27 1996 in Trassenheide on the Baltic Sea island of Usedom Seventy mathematicians  
from ten countries participated The preceding eleven conferences too were held in places of natural beauty throughout West  
Pomerania the first time in 1972 in Zinnowitz which is in the immediate area of Trassenheide The conferences were founded  
and led ten times by Professor Bittner Greifswald and Professor Klotzler Leipzig who both celebrated their 65th birthdays in  
1996 The 12th conference in Trassenheide was therefore also dedicated to L Bittner and R Klotzler Both scientists made a  
lasting impression on control theory in the former GDR Originally the conferences served to promote the exchange of  
research results In the first years most of the lectures were theoretical but in the last few conferences practical applications  
have been given more attention Besides their pioneering theoretical works both honorees have also always dealt with  
applications problems L Bittner has for example examined optimal control of nuclear reactors and associated safety aspects  
Since 1992 he has been working on applications in optimal control in flight dynamics R Klotzler recently applied his results  
on optimal autobahn planning to the south tangent in Leipzig The contributions published in these proceedings reflect the  
trend to practical problems starting points are often questions from flight dynamics      **Catalog of Copyright Entries.**

*Linear Systems* Henri Bourlès, 2013-05-06 Linear systems have all the necessary elements modeling identification analysis and control from an educational point of view to help us understand the discipline of automation and apply it efficiently This book is progressive and organized in such a way that different levels of readership are possible It is addressed both to beginners and those with a good understanding of automation wishing to enhance their knowledge on the subject The theory is rigorously developed and illustrated by numerous examples which can be reproduced with the help of appropriate computation software 60 exercises and their solutions are included to enable the readers to test and enhance their knowledge

Mathematical Control Theory Jerzy Zabczyk, 2009-11-03 Mathematical Control Theory An Introduction presents in a mathematically precise manner a unified introduction to deterministic control theory With the exception of a few more advanced concepts required for the final part of the book this presentation requires only a knowledge of basic facts from linear algebra differential equations and calculus In addition to classical concepts and ideas the author covers the stabilization of nonlinear systems using topological methods realization theory for nonlinear systems impulsive control and positive systems the control of rigid bodies the stabilization of infinite dimensional systems and the solution of minimum energy problems The book will be ideal for a beginning graduate course in mathematical control theory or for self study by professionals needing a complete picture of the mathematical theory that underlies the applications of control theory
