Simplicius: On Aristotle On the Heavens 2.10-14 Simplicius,2014-04-22 Aristotle believed that the outermost stars are carried round us on a transparent sphere There are directions in the universe and a preferred direction of rotation The sun moon and planets are carried on different revolving spheres The spheres and celestial bodies are composed of an everlasting fifth element which has none of the ordinary contrary properties like heat and cold which could destroy it but only the facility for uniform rotation But this creates problems as to how the heavenly bodies create light and in the case of the sun heat The topics covered in this part of Simplicius commentary are the speeds and distances of the stars that the stars are spherical why the sun and moon have fewer motions than the other five planets why the sphere of the fixed stars contains so many stars whereas the other heavenly spheres contain no more than one Simplicius has a long excursus on planetary theory in his commentary on this chapter discussion of people s views on the position motion or rest shape and size of the earth that the earth is a relatively small sphere at rest in the centre of the cosmos **Tipi** Paul Goble,2013-02-22 Award winning author Paul Goble examines the construction art and significance of the tipi to the Plains Indians in his newest book entitled Tipi Home of the Nomadic Buffalo Hunters Through a re telling of the old timer s stories Goble shows how the tipi was more than just a home but an expression of spiritual beliefs **Chlorophenols: Advances in Research and Application: 2011 Edition** ,2012-01-09 Chlorophenols Advances in Research and Application 2011 Edition is a ScholarlyPaper that delivers timely authoritative and intensively focused information about Chlorophenols in a compact format The editors have built Chlorophenols Advances in Research and Application 2011 Edition on the vast information databases of ScholarlyNews You can expect the information about Chlorophenols in this eBook to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of Chlorophenols Advances in Research and Application 2011 Edition has been produced by the world s leading scientists engineers analysts

Theory of Algebraic Functions of One Variable Richard Dedekind, Heinrich Weber, 2012-07-23 This book is the first English translation of the classic long paper *Theorie der algebraischen Functionen einer Veranderlichen* Theory of algebraic functions of one variable published by Dedekind and Weber in 1882 The translation has been enriched by a Translator's Introduction that includes historical background and also by extensive commentary embedded in the translation itself The translation introduction and commentary provide the first easy access to this important paper for a wide mathematical audience students historians of mathematics and professional mathematicians Why is the Dedekind Weber paper important In the 1850s Riemann initiated a revolution in algebraic geometry by interpreting algebraic curves as surfaces covering the sphere He obtained deep and striking results in pure algebra by intuitive arguments about surfaces and their topology However Riemann's arguments were not rigorous and they remained in limbo until 1882 when Dedekind and Weber put them on a sound foundation The key to this breakthrough was to develop the theory of algebraic functions in analogy with Dedekind's theory of algebraic numbers where the concept of ideal plays a central role By introducing such concepts into the theory of algebraic curves Dedekind and Weber paved the way for modern algebraic geometry
