Arrl Antenna 18ed:

The Analytical Foundations of Loop Antennas and Nano-Scaled Rings Arnold McKinley, 2019-03-27 This book develops the analytical theory of perfectly conducting and lossy metal circular round wire loop antennas and nano scaled rings from the radio frequency RF regime through infrared and the optical region It does so from an antenna theory perspective It is the first time that all of the historical material found in the literature has appeared in one place It includes particularly material that has appeared in the literature only in the last decade and some new material that has not yet been published The book derives the input impedance resonances and anti resonances the RLC circuit model representation and radiation patterns not only of closed loops and rings but also of loops and rings loaded randomly and multiply with resistive and reactive impedances Every derivation is compared with simulations run in Microwave Studio MWS It looks carefully at the physical response of loop antennas and nano rings coupled to a source at one point in the periphery and at such rings illuminated by a plane wave arriving from every different direction with the E field in all polarizations The book ends with a brief look at polygonal loops two dimensional arrays of nano rings and Yagi Uda arrays
