Clitics and Constituents in Phrase Structure Grammar Philip H. Miller, 1992 Mathematics of Language Alexis Manaster-Ramer, 1987-01-01 By mathematics of language is meant the mathematical properties that may under certain assumptions about modeling be attributed to human languages and related symbolic systems as well as the increasingly active and autonomous scholarly discipline that studies such things More specifically the use of techniques developed in a

variety of pure and applied mathematics including logic and the theory of computation in the discovery and articulation of insights into the structure of language Some of the contributions to this volume deal primarily with foundational issues others with specific models and theoretical issues A few are concerned with semantics but most focus on syntax The papers in this volume reveal applications of the several fields of the theory of computation formal languages automata complexity formal logic topology set theory graph theory and statistics The book also shows a keen interest in developing mathematical models that are especially suited to natural languages

Logical Aspects of Quantification in Natural Language Aleksy Molczanow, 2004 Elucidates the relation between quantifiers in formal logic and quantifiers in natural language Demystifies the theoretical apparatus of contemporary logic as it provides theoretical explanations concerning quantification in natural language and idiomatic quantifiers in ordinary English in particular

Studies in Contemporary Phrase Structure Grammar Robert D. Levine, Georgia M. Green, 1999 This book explores a wide variety of theoretically central issues in the framework of Head Driven Phrase Structure Grammar HPSG a major theory of syntactic representation particularly in the domain of natural language computation HPSG is a strongly lexicon driven theory like several others on the scene but unlike the others it also relies heavily on an explicit assignment of linguistic objects to membership in a hierarchically organised network of types where constraints associated with any given type are inherited by all of its subtypes This theoretical architecture allows HPSG considerable flexibility within the confines of a highly restrictive mathematically explicit formalism requiring no derivational machinery and invoking only a single level of syntactic representation The separate chapters consider a variety of problematic phenomena in German Japanese and English and suggest important extensions of and revisions to the picture of HPSG

Head-Driven Phrase Structure Grammar Stefan Müller, Anne Abeillé, Robert D. Borsley, Jean-Pierre Koenig, 2004-11-07 Head Driven Phrase Structure Grammar HPSG is a constraint based or declarative approach to linguistic knowledge which analyses all descriptive levels phonology morphology syntax semantics pragmatics with feature value pairs structure sharing and relational constraints In syntax it assumes that expressions have a single relatively simple constituent structure This volume provides a state of the art introduction to the framework Various chapters discuss basic assumptions and formal foundations describe the evolution of the framework and go into the details of the main syntactic phenomena Further chapters are devoted to non syntactic levels of description The book also considers related fields and research areas gesture sign languages computational linguistics and includes chapters comparing HPSG with other frameworks Lexical Functional Grammar Categorical Grammar Construction Grammar Dependency Grammar and Minimalism

Toward Consilience Gerald A. Cory Jr., 2012-12-06 The present work is the second in a series constituting an extension of my doctoral thesis done at Stanford in the early 1970s Like the earlier work *The Reciprocal Modular Brain in Economics and Politics* Shaping the Rational and Moral Basis of Organization Exchange and Choice Plenum Publishing 1999 it may also be considered to respond to the call for consilience by Edward O Wilson I agree with Wilson that there is a pressing need in the

sciences today for the unification of the social with the natural sciences I consider the present work to proceed from the perspective of behavioral ecology specifically a subfield which I choose to call interpersonal behavioral ecology th Ecology as a general field has emerged in the last quarter of the 20 century as a major theme of concern as we have become increasingly aware that we must preserve the planet whose limited resources we share with all other earthly creatures Interpersonal behavioral ecology however focuses not on the physical environment but upon our social environment It concerns our interpersonal behavioral interactions at all levels from simple dyadic one to one personal interactions to our larger even global social economic and political interactions *The Rise of Agreement* Eric Fuss,2005-01-01 This book investigates the historical paths leading from pronouns to markers of verbal agreement and proposes a unified formal account of this grammaticalization process In opposition to beliefs widely held in the literature it is argued that new agreement formatives can be coined in a multitude of syntactic environments Still the individual paths toward agreement are shown to exhibit a set of underlying similarities which are attributed to universal principles that govern the reanalysis of pronominal clitics as exponents of verbal agreement across languages It is claimed that syntactic principles impose only a set of necessary conditions on the reanalysis in question while its ultimate trigger is morphological in nature More specifically it is argued that the acquisition of inflectional morphology is governed by blocking effects which operate during language acquisition and promote the grammaticalization of new markers if this change serves to replace worn out underspecified forms with new more specified candidates
