dataset from the MAGIC telescopes and comprehensively discusses the implications of pulsed TeV gamma rays for state of the art pulsar emission models Using these results the book subsequently explores new testing methodologies for Lorentz Invariance Violation in terms of a wavelength dependent speed of light The book also covers an updated search for Very High Energy VHE 100 GeV emissions from millisecond pulsars using the Large Area Telescope on board the Fermi satellite as well as a study on the promising Pulsar Wind Nebula candidate PSR J0631 The observation of VHE gamma rays is essential to studying the non thermal sources of radiation in our Universe Rotating neutron stars also known as pulsars are an extreme source class known to emit VHE gamma rays However to date only two pulsars have been detected with emissions above 100 GeV and our understanding of their emission mechanism is still lacking

Visual Astronomy of the Deep Sky Roger Nelson Clark, 1990 Atlas over de vigtigste galakser og nebuloser som kan ses i teleskop af amat rastronomer Rhythm in the Sky Gautam Gangopadhyay, Anirban Kundu, 2024-05-21 This book provides a brief and pedagogic introduction to a variety of topics with a common motif that they all occur in some way or other in the sky and involve some sort of rhythm Sky is not just the inside of a dome there are many strata each with its own beauties and mysteries As we go up the atmosphere thins out and ends and we move into the space into the realms of planets asteroids and comets and even further beyond the solar system into the vast Milky Way galaxy This is where the night sky comes in with all its twinkling stars the stars in our own galaxy We must use telescopes to explore further In this book we will start from the ancient astronomers and how they studied the motion of earth through space Study of planetary orbits from Kepler and Newton to Einstein had been fascinating We will try to take the reader through the wonderful worlds of the cepheid variables and pulsars to the strange oscillations of the neutrinos and the new eye to look at the universe namely the gravitational waves The book stops at the discovery of the black hole at the center of our galaxy but that is just because we must stop somewhere or the assortment could go on ad infinitum Some of these topics are highly mathematical in nature but we will try to avoid the complicated mathematics as much as possible without compromising with the rigor

Generalized Radon Transforms And Imaging By Scattered Particles: Broken Rays, Cones, And Stars In Tomography Gaik Ambartsoumian, 2023-03-14 A generalized Radon transform GRT maps a function to its weighted integrals along a family of curves or surfaces Such operators appear in mathematical models of various imaging modalities The GRTs integrating along smooth curves and surfaces lines planes circles spheres amongst others have been studied at great lengths for decades but relatively little attention has been paid to transforms integrating along non smooth trajectories Recently an interesting new class of GRTs emerged at the forefront of research in integral geometry The two common features of these transforms are the presence of a vertex in their paths of integration broken rays cones and stars and their relation to imaging techniques based on physics of scattered particles Compton camera imaging single scattering tomography etc This book covers the relevant imaging modalities their mathematical models and the related GRTs The discussion of the latter comprises a thorough exploration of their known mathematical

properties including injectivity inversion range description and microlocal analysis The mathematical background required for reading most of the book is at the level of an advanced undergraduate student which should make its content attractive for a large audience of specialists interested in imaging Mathematicians may appreciate certain parts of the theory that are particularly elegant with connections to functional analysis PDEs and algebraic geometry **Scientific and Technical**
