Iskandar,2000-09-12 Written by a multidisciplinary group of scientists from around the globe Environmental Restoration of Metals Contaminated Soils provides a summary of the current environmental remediation technology Topics include Physical Chemical processes for in situ remediation by adding amendments for stabilization The mechanics of metal retention and release from soils Chemical remediation method for soil contaminated with Cd and Pb The effect of soil pH on the distribution of metals among soil fractions Physical and electrical separation methods for soil remediation Relationship between the phytoavailability and the extractability of heavy metals An overview on environmental restoration of Se contaminated soils Trace elements in the soil plant system under tropical environment The process of metal removal by chelation using amino acids The effects of natural zeolite and bentonite on the phytoavailability of heavy metals Metal uptake by agricultural crops from sewage sludge treated soils In many cases an

integrated approach to the remediation of metals contaminated soil yields the best results Environmental Restoration of Metals Contaminated Soils explores the emerging issues of the biogeochemistry of trace elements in the environment and provides an approach combining elements from biology geochemistry hydrology and soil physics and chemistry Advances in Bioremediation and Phytoremediation Naofumi Shiomi,2018-04-04 The pollution of soil and groundwater by harmful chemical compounds and heavy metals is becoming very serious in many countries Although remediation is necessary as soon as possible the performance of conventional bioremediation processes is not sufficient This book deals with advances in bioremediation and phytoremediation processes by using excellent strains and a combination of processes In the chapters of this book the researchers have introduced the overall status of contamination the characteristics of bioremediation using halobacteria Candida yeast and autochthonous bacteria and phytoremediation using macrophytes Moreover other researchers introduced a process using biochar and electric currents and this combination of processes and phytoremediation enhances the overall process **Restoration Ecology and Sustainable Development** Krystyna M. Twardowska,H.E. Allen,A.F. Kettrup,W.J. Lacy,2004-04-22 This book covers a broad group of wastes from

biowaste to hazardous waste but primarily the largest by mass and volume group of wastes that are not hazardous but also are not inert and are problematic for three major reasons 1 they are difficult to manage because of their volume usually they are used in civil engineering as a common fill etc where they are exposed to environmental conditions almost the same way as at disposal sites 2 they are not geochemically stable and in the different periods of environmental exposure undergo transformations that might add hazardous properties to the material that are not displayed when it is freshly generated 3 many designers and researchers in different countries involved in waste management are often not aware of time delayed adverse environmental impact of some large volume waste and also do not consider some positive properties that may extend the area of their environmentally beneficial application
